LOCAL ITEMS

Mrs. G. Frederickson, of Trill, B.C., who has been visiting for two weeks at the home of her daughter, Mrs. L. Robinson, left on Monday for Sibbald.

The first car load of 1927 wheat was shipped from Chinook last Friday from the Western Canada Flour Mills elevator.

William Gordon is helping with the harvesting of the crop on Mr. John Coutts' farm in the Coliholme district.

Effective September 25, the east bound local train running between Hanna and Kindersley is due at Chinook 11:10 a.m. on Monday, Wednesday and Friday, and the west bound local train at 2:20 p.m. on Tuesday, Thursday and Saturday.

C. W. Rideout has been appointed by the Wheat Pool to cash the grain tickets for grain sold at their elevator at this point.

Mrs. H. E. Robinson, of Rearville, who has been spending the past two months in Calgary, returned on Sunday morning.

E. Dancey, who has been a student missionary in the Tipperary district during the summer, left on Monday for Toronto where he will resume his studies at College.

Born—To Mr. and Mrs. Clifford Bowman, of Crystal district, at the Cereal Hospital on Saturday, September 17, a son.

Mr. and Mrs. C. W. Bassett, of Huxley, were visitors over the week-end at the home of their son and daughter-in-law, Mr. and Mrs. F. L. Bassett.

Quite a number of young folks from Chinook attended the dance at Heathdale School last Friday night. All report an enjoyable time.

Mr. and Mrs. J. Deman, of Calgary, and Mr. and Mrs. G. Crozer, of Richdale, were visitors at the home of Mr. and Mrs. J. W. Deman over the week-end.

The ladies card club met at the home of Mrs. Carter on Tuesday evening. Mrs. Dawson won the first prize an embroidered towel. The members will meet next Tuesday evening at the home of Mrs. L. Robinson.

The opening of Normal School in Calgary has been postponed to October 3.

Messrs. Cooley Bros., sold a Fordson tractor and a Wood separator this week to J. A. McLean, of Rollinson, a Fordson tractor to F. Boeschling, of Chalmers, and a Ford truck to Clifford Bowman.

A dance will be held in Laughlin school next Friday night.

Leonard Bayley, of Wayne, spent Sunday at the parental home here, returning on Monday.

Miss Vera Youngren, of Kinmundy, left on Saturday for Medicine Hat, where she will teach school.

Chinook United Church
Rally Day Service Next Sunday
Morning, September 25

The Sunday School Rally Day Service will be held in the Chinook United Church next Sunday morning, September 25, at 11 o'clock. This is one day in the year set apart for a children's service, and the service next Sunday morning will be of interest to young and old. There will be a splendid program of recitations and songs given by the children, and every parent in town is cordially invited to be present. Remember the time 11 a.m. next Sunday morning.

M.D. OF COLIHOLME

A meeting of the Council of the Municipal District of Coliholme was held in the Coliholme School on Friday evening. Members present Messrs. Shier, Warren, Dunster, Ferguson and Gordanier.

The monthly financial statement was presented by the Secretary and confirmed.

The Council decided to give a grant of \$15.00 to the Youngstown Rest Room.

That the reserve bids on lands to be offered for sale at the Municipal Sale of lands on September 29, be set at the amount of all taxes and costs against the said lands.

Mr. Trueblood was appointed auctioneer for the Tax Sale on September 29th.

The Secretary was instructed to make seizure for arrears of taxes on a number of parcels of land in the Municipality.

The Secretary was also instructed to write all parties owing seed grain and relief accounts to the Municipality requesting them that a reasonable payment be made on same from the proceeds of this year's crop.

The Council adjourned to meet again on November 5.

CHINOOK SCHOOL BOARD MEET

A meeting of the Trustees of the Chinook Consolidated School District was held in the school on Saturday evening. Members present were J. L. Carter, W. Wright, and A. Rosenau.

There was very little business transacted at the meeting. Several question regarding school matters were discussed, and the following accounts were passed and ordered to be paid:

Levi Vennard	\$21.00
W. A. Stecke	13.00
R. W. Wright	9.65
Imperial Lumber Co.	52.56
J. S. Smith	29.25
C. E. Barry	1.50

Messrs. Rosenau and Wright were appointed a committee to order robes and foot-warmers for the school-vaas.

Mr. and Mrs. W. A. Hurley motored to Drumheller on Wednesday to meet and bring back with them Mrs. Hurley's sister, Mrs. Sheppard, of Toronto, who is spending a holiday in the West.

Fight the Fire Fiend

The week commencing October 9 has, by proclamation published in the Official Gazette at Ottawa, been declared Fire Prevention Week throughout Canada. The object is, of course, to focus public attention upon the enormous losses, both of life and property, resulting from fire with a view to the adoption of more effective safeguards against fire, and to educate all people, and especially children, against habits of carelessness in the handling of matches, gasoline and other combustibles, and in the disregard of common-sense methods in the matter of extinguishing camp fires, and such simple matters as throwing away the still lighted stubs of cigars and cigarettes.

At first glance it would seem to be quite unnecessary for the national government to officially set aside one week out of every fifty-two for the avowed purpose of teaching a presumably intelligent, educated and business-like people to safeguard their own lives, homes and property from destruction. Unfortunately, Canada's fire record proves conclusively that it is only too necessary to keep up a persistent campaign to awaken the people from their carelessness and indifference in this very vital matter.

Canada, which is so progressive in many ways, and has taken the leadership in numerous worthwhile movements, and can claim the honor of achievements, occupies a low place among the nations of the world when statistics of fire losses are studied. Few countries, if, indeed, any one, annually record the appalling fire losses which take place in Canada. This Dominion's fire loss per head of population is about the highest in the world, and the passing years do not reveal much improvement.

Canada has already sustained the loss not merely of millions but actually billions of dollars worth of forest wealth, some of which is gone forever, and where long periods of time will be required to make good the loss in other districts. And these forests are one of Canada's greatest assets, —one of the principal factors today, and for the future, in building up the Dominion's greatest industrial enterprises and providing a very large percentage of the Dominion's export trade.

The fire fiend takes a yearly monthly, almost daily toll of human life, as well as leaving behind it a trail of lifelong suffering and economic loss in blinded and crippled humanity.

Because of the high rate of fire losses, the people of Canada have to pay abnormally high rates for fire insurance. The insurance companies are not to blame for demanding high premiums. They must protect themselves and their policy holders, and just so long as fires in Canada remain so numerous and costly, so long will the cost of insurance against fire remain a heavy drain upon the business of the Dominion.

Then, too, there is the further heavy burden imposed upon all urban communities in the maintenance of elaborate and expensive fire-fighting equipment, and large expenditures to augment water supplies for fire-fighting purposes greatly in excess of the daily domestic requirements of cities and towns.

All these forms of protection are necessary, and must be paid for in our tax bills. But because of the frequency of fires largely the result of carelessness and neglect of the most important precautions on the part of many people, these services have to be maintained on a much more extensive and expensive scale than would otherwise be necessary.

Fire Prevention Week should, therefore, be observed all over the country. Special attention should be paid to the subject in all schools, while each individual householder should devote a little time to a thorough examination of his premises and make a close check-up of conditions in and around all buildings. Rubbish should be cleared away, unprotected stove pipes, electric wires, gasoline and oil supplies attended to, and every member of the family cautioned to exercise the greatest care in handling of matches and all combustible materials, lighted lamps, and in the making and extinguishing of fires. Finally, all property should be adequately insured notwithstanding all precautions that may be taken.

Attention to these important matters now may save much loss and suffering in the future.

Giant Dirigible Damaged

Expansion Of Gas Through Weather
Conditions Caused Peculiar
Accident

A peculiar accident to the giant dirigible Los Angeles occurred while the huge airship was moored at her mast in Lakehurst, N.J. The temperature rose suddenly, causing the helium gas in her containers to expand rapidly, and the wind shifted 150 degrees in a few seconds. The result was that the ship threw her stern high into the air, almost at an angle of ninety degrees, and whirled around with the sudden change in the wind. The temperature went back to normal rapidly, so that the gas assumed its normal volume and the tail of the ship dropped down. Meanwhile, however, loose gear in the ship was thrown about, causing some damage.

French Use Bicycles

Report Shows They Out-Number
Automobiles Ten-To-One

The number of bicycles in use in France in 1925 amounted to 7,112,200, an increase of 5 per cent. over 1925, according to Trade Commission reports of Northern France, a total of 256,000 bicycles are in use, or one to ten as many bicycles in France as automobiles.

Reconstructing Ruins In Palestine

Interesting Places Being Restored In
Holy Land

There is no country where the excavator is so busy as in Palestine. The traveller to the Holy Land will find in the near future he will be able to go to the site of ancient Capernaum, on the northern shores of the Sea of Galilee, and there stand within the very walls of the synagogue in which Christ preached to the people nearly two thousand years ago. At the present time archaeologists and others are busily engaged in reconstructing the ruins the place of worship which the centurion of the Gospel built for the Jews. The very one in which our Saviour taught.

Will Plead Law Cases In European Courts

American Woman Attorney Going To
Paris, Athens and London

An American woman attorney will try cases in Paris, Athens and London while on a "vacation." She is Miss Grace H. Brown of Detroit, who plans to sail to Europe soon to carry out her legal plans. In Paris Miss Brown will represent an Armenian claiming \$500,000 from the Turkish Government for land he alleges was confiscated. She has been retained in an immigration case in Athens and an involved estate will claim her attention in the London courts. Miss Brown has received introductory letters to the foreign courts from Secretary of State Frank B. Kellogg.

Toes Kept Free From Sore Corns

When you notice any sign of callus on the feet or toes—that's the time to put on a few drops of Putnam's Corn Extractor. Do this and you prevent corns. No matter if the corn is hard or soft. Let it be on top or between the toes. Putnam's will move it without pain. Indeed on "Putnam's" Corn Extractor. It does the work—and roots out the corn.

Self-Sustaining Air Services
Probably the only two self-sustaining air transport routes operated during 1925 in the Empire were in Canada—those from Halleybury to the Royn, and from Sioux Lookout to the Red Lake mining fields. These are on an absolutely commercial basis and have had no Government subsidies.

A PERFECT MEDICINE FOR LITTLE ONES

Baby's Own Tablets Should Be
In Every Home Where There
Are Children

The perfect medicine for little ones is found in Baby's Own Tablets. They are a gentle but thorough laxative which regulate the bowels, sweeten the stomach, drive out constipation and indigestion; break up colds and simple fevers and promote healthful refreshing sleep. It is impossible for Baby's Own Tablets to harm even the newborn babe as they are absolutely guaranteed free from opiates or any other injurious drug.

Concerning the Tablets, Mrs. Alex. J. Perry, Atlantic, N.S., writes:—"I always keep Baby's Own Tablets in the house for the children, as I have found them a perfect medicine for little ones."

Baby's Own Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Japan Needs Post Offices

Government Is Considering Plans For
Increase In Number

More post offices are needed in Japan. For each 6,700 persons in the country there is only one post office. England and Germany have one to 2,000 persons. The Communications Department is considering plans for the increase in the number of offices, and an appropriation is to be included in next year's Budget for the opening of 5,000 more post offices over a period extending ten years. At the end of ten years each village throughout Japan will have a post office all to itself.

COLDS COST MONEY

FORTIFY
YOURSELF
AGAINST
THEM

It is estimated that a sufferer from colds loses three days' time from work in a year. At work, in the "morale" or at any entertainment, if your neighbor has a cold and sneezes or coughs, the air is full of germs and if you are not in good condition, you may become ill. The only protection you can have is to build resistance against disease germs. Take that splendid herbal tonic,

Coal Not Merely a Fuel

German Scientists Discover Many
Valuable By-Products

European scientists appreciate that "coal is not merely a fuel but contains raw products to make things of," declared Dr. Thomas S. Baker, president of Carnegie Institute of Technology, upon his return from a trip abroad.

Coal's potentialities are particularly appreciated in Germany, according to Dr. Baker, where "there has been a most striking development in synthetic fertilizers in connection with coal—the outgrowth of the fixed nitrogen process developed during the war. It is a matter of very great economic force to the country and farm productivity has been materially increased."

"A great deal of the enormous success that the German chemical Trust is having comes through the chemistry of coal," Dr. Baker said.

"While Germany has lost its monopoly of dyes, it is developing other processes that are of great importance to modern industry. This trust is said to 'be producing synthetic gasoline on a commercial basis.'"

Canada Favored For League Seat

London Paper Says Dominion Well
Qualified For Seat On Council

The London Observer, commenting on Canada's candidacy for a seat on the League Council, says it would be hard to pick another candidate more powerfully qualified for the privilege. The great war was warrant enough of Canada's capacity for international service and she has played other parts since then.

In numbers and influence taken together, continues the Observer, Canada ranks high in the list of candidates, and above all it would be impossible for the league to have for the first time a direct representative from North America upon the council.

It Will Prevent Uterine Throat.
At the first symptoms of sore throat, which presages infection and inflammation, take a spoonful of Dr. Thomas' Electric Oil. Add a little sugar to it to make it palatable. It will allay the irritation and prevent the ulceration and swelling that are so painful. Those who were periodically subject to quinsy have thus made themselves immune to attack.

Antiseptic Perfumes

Perfume and Toilet Preparations
Have Distinct Antiseptic Value

More important than the agreeable sensations carried by the delicate nerves to the brain and their effect on the nervous system is the hygienic value of a perfume and a toilet preparation, states the N.I.L. service in a bulletin recently published. Nearly all perfumery flavors are aromatic substances and as such are germicidal. The use of perfume no doubt lessens the infection that threatens in crowded covered spaces even if freely cleansed by chemicals such as carbolic acid, formaldehyde or chloride of lime. Alcohol between 60 to 80 per cent. strength is a strong antiseptic and increases the germicidal action of essential oils. Rose-water, owing to its contents of phenyl-ethylalcohol, which can be made synthetically, is used as a sleeping potion for children and benzyl benzoate and benzyl alcohol, other synthetics, have pain-alleviating properties similar to opium without its narcotic and habit-forming properties.

Punished For Cruelty

We wonder what some of our courts would say to a line of ten dollars behind and twenty-five more or scrapping a live carp with a curry-comb. Yet this was the punishment imposed upon a man in the English Police Courts. Some people think a fish is not an animal.

The oldest university in the world is at Padua in Italy, founded in 1255 A.D. by Lothar, grandson of Charlemagne.

One day's exercise with a wood saw is worth two weeks of physical culture.

Drives away pain — Minard's Liniment.

Defies Alpine Climbers

Mount Robson Is Still Victor Over
Mountaineers

Mount Robson, giant peak of the Canadian Rockies, this year has turned back every party of Alpinists who have attempted to scale it. Two recent attempts were made by members of the Seattle Mountaineers' Club, but they too met with failure.

A driving rain and low-lying clouds were encountered by the climbers on their dangerous ascent from the valley floor. At high altitude they ran into sleet and then, when the weather cleared, they waited waist-deep through snow. Finally, when success seemed almost certain, they brought up against a huge icefall blocking the only possible approach to the summit.

The cliff is 100 feet high and almost perpendicular. The climbers said they would try again next year.

Bees Disturbed Church Service

Half Million Swarmed Under Roof In
English Town

Bees have been known to swarm in many queer places, but one of the strangest cases was that of a swarm about half a million strong that settled beneath the roof of Kossington Church, near Doncaster, England.

So great as the noise of their humming that it could be heard above the sound of the organ and the voices of the choir and congregation.

To remove them a bee expert had to cut away a part of the roof. He discovered a solid mass of bees six feet by four feet. Smoke bombs had to be used to overcome the swarm, and only a mask and gauntlets protected the man from the infuriated insects.

Asthma Is Torture. No one who hasn't gasped for breath in the power of asthma knows what such suffering is. Thousands do know, however, from experience how immeasurable is the relief provided by that marvelous preparation, Dr. J. D. Kellogg's Asthma Remedy. For years it has been relieving the most severe cases. If you are a sufferer do not delay a day in securing this remedy from your druggist.

Place For Garnet Wheat

New Variety Is Giving a Good Account
Of Itself This Year

"Garnet wheat is giving a good account of itself this year," said L. H. Newman, Dominion cerealist. "The first crop of wheat delivered on western railway lines this year was 'Garnet,'" he declared, "and I am pleased to hear that the Demonstration Farm at Raymond cut Garnet wheat estimated to run 30 bushels to the acre, two weeks earlier than the average cutting." Mr. Newman made it plain that, although he had carried on the closing experiments which resulted in the production of Garnet, he was not making undue claims for it. He is still very strong for Marquis as the standard wheat, but believes there is an important place for the earlier-maturing Garnet.

Some men waste a lot of valuable time explaining their actions.

Treat Colds 2 Ways

With One
Treatment
RUBBED ON
throat and
chest, Vicks
does two things at once:

(1) It is vaporized by the body heat and inhaled direct to the inflamed air passages, and
(2) It stimulates the skin like an old-fashioned poultice and "draws out" the soreness.

VICKS
VAPORUB
OVER 12 MILLION JARS USED YEARLY

Was Descended From Well Known Character

Direct Descendant Of Jack Horner
Dies In England

Sir John Horner, lord of the manor of Wols and direct descendant of Jack Horner, died recently in Somerset, England, at the age of 84. Jack Horner, of nursery rhyme fame, was steward of the temporalities of the great Somerset Abbey of Glastonbury.

At the dissolution of monasteries, tradition says, the site into which he put his thumb contained the title deeds to the manor of Wols, which was the plum that Jack pulled out and made himself owner of a large slice of monastic lands. Wols Park has been in the family nearly 500 years and the eldest son has always been named John.

Minard's Liniment cures sore feet.

A Donalson exhibition, primarily advertising Australia, but on the lines of the Empire exhibition at Wembley, London, in 1925, is to be held at Sydney, probably in 1931.

War On Farm Pests Must Be Carried On With The Aid Of Science

Farmers of the future will be largely dependent upon the science and the labors of research students, declares Dr. Austin H. Clark, biologist of the Smithsonian Institution, in a statement just issued on the importance of biological research.

Dr. Clark declares that the agricultural war being waged against the pests of the farms is a war in which chemistry and science is playing an important part. In their present-day knowledge of how to meet and fight these foes, he states the husbandmen of the world are 300 years behind the times, and science has only just begun the task of furnishing the organized assistance to which the farmers are entitled.

The full text of the statement follows:

Man lives in a world replete with other forms of life competing with him for his food supply and even striving to consume the very substance of his body. Human existence is a constant struggle with the insects and the other things that consume the grains and other crops, the cattle and the poultry, and with the diseases that consume the flesh.

Our farmers grow the crops and stock by which we live. In doing this they spend their lives in constant costly warfare with the insects. The number of people who are fed by the wheat or corn or other grain destroyed by insects or clothed by the cotton or wool lost every year represent the casualties on this battle line. We discount these casualties as "losses to the farmer." But take these numbers and read them as "losses to our army" and see what that would mean. The two are really alike in being both losses to our man power and all that that implies.

The weapons of the fighting armies always represent the highest attainable perfection of the moment. We know that this is necessary; we also know our fellow men. The farmer does the best he can, but his weapons represent perfection, while the hordes which he is called upon to meet are merely "bugs" to him.

Our farmers have no time to spend on the details of entomology, or in the study of the parasites that infest their animals and fowls, any more than our soldiers have time to perfect themselves in the mathematics of range-finding, or in the details of the chemistry of the explosives used in war.

Chemistry and mathematics and that form of social understanding called diplomacy have made the modern armies what they are. Chemistry and mathematics and a similar understanding of the life history, habits and propensities of his enemies, insects and parasites, will do the same for modern farmers. Just as the modern army owes its effectiveness to the labors in the past of a relatively small minority of men, largely unconnected with military life, so the farmer of the future more and more will be dependent on the labors of the research students.

In their knowledge of their foes and how to meet them, our farmers are 300 years behind our soldiers; and if we compare the potential casualties represented by insect depredations, by loss through parasites, or by imperfect knowledge of the life history, habits and propensities of his enemies, insects and parasites, will do the same for modern farmers. Just as the modern army owes its effectiveness to the labors in the past of a relatively small minority of men, largely unconnected with military life, so the farmer of the future more and more will be dependent on the labors of the research students.

How about our fishermen and those who live along the coasts? In the not distant future when the cultivation of the land has reached its limit and no further increase in our crops is possible we shall have to cultivate the sea as well, and from it take the food to feed our surplus population.

World's Dirtiest Place
Which is the dirtiest place in the world? This unenviable distinction belongs to Platjoug, a village built some 500 years ago among the mountains of Tibet. Platjoug consists of a fortress, surrounded by 200 hovels. As everything which we would throw into a dustbin is there simply thrown out, these hovels are now below the level of the ground.

He—'I'm poor, but poverty is no disgrace.'
She—'No; but that's about the only thing that can be said in its favor.'

The favorite cat of Sushunah of Sarakata, a wealthy Japanese prince, died recently and was accorded a costly funeral with 21 pall-bearers.

Increase Yield Of Wool

Wool Producing Capacity Of Sheep Improved By Transplanting Glands

Dr. Sergio Voronoff, noted gland specialist, started the tenth international zoologists' congress at Hungary by the announcement that the wool producing capacity of sheep can be vastly increased by the transplantation of glands. The method with which he experimented for three years on an Algerian farm resulted in a 25 per cent. increase in the yield of wool, he declared. He transplanted the glands of mature rams in six months lambs. The lambs thus treated were, on reaching the age of two years, an average 16 pounds heavier than ordinary sheep, and each time they were shorn they yielded 22 ounces more wool than those in which nature had been allowed to take its course.

Dr. Voronoff said he also found that the offspring of the rejuvenated lambs had their sizes characterized as 25 per cent. greater weight and 25 per cent. larger wool yield. Inasmuch as each ram in the course of a year impregnates 50 sheep, 100 rejuvenated rams sufficed to raise a superior flock of sheep annually.

Trade With Britain

Great Britain's Increasing Demand For Canadian Goods

A remarkable and increasing demand for Canadian food products in Great Britain is reported by Major G. H. Johnson, the Canadian trade commissioner for Glasgow, who is visiting in the Dominion for a few weeks. Major Johnson pointed out that since the depression following the post-war boom, export trade from Canada to the United Kingdom has shown a very marked increase and that various Canadian products which in past years were conspicuous by their absence on the British markets are now in very large demand.

An Ideal Wheat

Double Chaff Grain Would Withstand Cold Says Motherwell

Wheat with double chaff, to protect it against early frosts in Western Canada, is urged by Hon. W. R. Motherwell, Minister of Agriculture, who spoke on Saskatchewan Day at the Canadian National Exhibition. The breeding of wheat with a double chaff, he thinks is quite within the range of possibility.

Stamp collecting is the hobby of several royalties, including the King of England, the Prince of Wales, King Alfonso of Spain, the Queen of Italy, and the crown prince of Italy and Sweden.

Where Traffic Is Quiet

Cities In New World Could Learn Much From Old London

"A Returned American," writing in the Atlantic Monthly, declares that, although he spent most of the winter in an hotel in the heart of Mayfair, distant only a few hundred feet from Piccadilly and three minutes walk from Regent Street, two of the busiest thoroughfares in London, he found his surroundings, both day and night, "as quiet as any country place here in America." But the seven nights that he spent in his usual excellent hotel in New York were "as restless as if I had been trying to sleep in a boiler factory. Fire engines tore by all night, shrieking like damned souls. Motor car horns honked and honked, and honked, without intermission every hour of the night."

As this man says, there is absolutely no reason for the bedlam which generally characterizes street traffic upon this side of the water, unless people really like it. London has as great a traffic as is to be found in any city in North America. It is a continuous stream of motor cars, lorries and motor "buses." Yet it moves as swiftly and as silently as a river. The people seem to prefer quiet, to appreciate its value to the human system, and to exercise sufficient control over traffic to have their views respected. In this respect, as in so many others, the Old World can teach the New World a much-needed and salutary lesson. If the institutions for treatment of nervous diseases are filled to overflowing, the constant din of traffic has played its part in bringing it about.

Possibilities Of Chemistry

Members Of Society Promise Earlier Potatoes By Treating Seed

The ability of chemists to speed crops and keep automobiles from rusting was discussed at the seventy-fourth meeting of the American Chemical Society in Detroit.

The application of ethylene chlorhydric gas in seed potatoes will speed the growth of the United States to produce an early crop and emancipate the country from reliance upon Bermuda for early potatoes, Dr. F. E. Denny, of Yonkers, N.Y., reported.

Florida peanut growers, he said, will be able to produce potatoes between peanut crops by utilizing this chemical contribution to agriculture.

Science has doomed the rusty motor car, said Dr. Horace W. Gilbert, of the Federal Bureau of Standards, Washington, reporting on the development of metal metal and other non-rusting materials for automobile use.

Britain's national debt, according to an official paper, is \$37,000,000,000. It is quite a considerable obligation to have to go to sleep on, but Britain will pay it—every cent of it.

Canadian Seeds Grow Better In All Parts of the World Than Seeds From Other Countries

Cauliflower King Of America

Klass de Jong, Of Kildonan, Manitoba, Again Carries Off Premier Honors

At the American Vegetable Growers' Association annual show, recently held at Syracuse, N.Y., Klass de Jong, a market gardener of East Kildonan, Manitoba, six miles north of Winnipeg, won for the second time the title of Cauliflower King of North America. Last year he won the crown at the A.V.G.A. Show at Cleveland, Ohio.

In competition with entries from several states Mr. de Jong carried off the championship prize for the six head of cauliflower that he exhibited, because of their superiority in size, weight, uniformity of shape and general appearance. Each of the half dozen cauliflowers was acknowledged by the judges to be among the finest specimens they ever had seen. In addition to winning the money prize given by the American Vegetable Growers' Association Mr. de Jong was awarded a silver cup donated by Alexander Forbes of Newark, New Jersey.

Klass de Jong is one of the most successful market gardeners in Western Canada. Twenty-one years ago he came from Holland and purchased for a nominal price the 40 acres he now cultivates and from which he makes a good living. Although Mr. de Jong won such notable distinction for cauliflowers, he grows a wide variety of other vegetables of equally high quality, for owing to the long sunny days in Western Canada vegetables and flowers, compared to the temperate zone, thrive particularly well.

France Seeks Name Of American Soldier

Anxious To Identify First One Who Fell In World War

The French Ministry of pensions is endeavoring to have the assembling of the American Legion convention to identify the first American who fell fighting under the French flag.

It is known that a young American soldier a colonial regiment en route to the front during the first days of the war, begged to be allowed to go along. He was accepted and was killed in action at Nomeny, Lorraine, on August 20, 1914.

This youth's name is not on the regiment roll. There was no formality about his joining the unit. He was standing in front of the barracks when he saw the infantry regiment, and asked:

"Can I go along?"
"Sure," replied the platoon.
That was all there was to it. The young man went along. Even his grave is not known, for bodies were changed several times after the first hurried internments.

Farmer Needs Education

No Profession In Which Brains Are More Essential

There is a popular misconception that the bovine type of farmer (all brawn and no brain) is the more likely to succeed. The fact is there is no profession in which brains are more essential than in the successful operation of a farm. Education does not, of course, necessarily make a man a success, nor does the lack of it foredoom a man to failure; but, in the long run, everything else being equal, the educated person will come out on top, and what is more, will get the most out of life. "Go back to school, young man or young woman, if you have the chance," says M. A. Jones, Bonaventure Statesman, "but go solely for the sake of what you can learn. Remember, however, your success in life depends as much upon ambition and determination as anything else. If you are determined to succeed, education is more than a stepping-stone. It is a series of stepping stones assuring you of a degree of satisfaction you will never reach. Rural life needs educated men and women, and none needs a better education than the farmer."

Farmer's Advocate—Let the home farm be known for something special—good horses, fine cattle, pigs or sheep, choice seed grain. Live stock need not be registered in order to be choice. Some farmers are noted for the extra fine bullocks marketed each year.

Boot saleswoman: "What size do you take, madam?"

Customer: "Well, five are my size, but five and a half are so comfortable that I wear shoes."

Because Canadian seeds seem to grow better in all parts of the world than seeds from any other country the Dominion is getting control of the tree seeds business of the world. The Antipodes, particularly Australia and New Zealand, take most of the seed exported from Canada but Italy will be the largest seed consumer this year. Capt. Wm. A. Edye-de-Hurst, of Deauhurst, Ont., president of the seed exporting business at that point, is responsible for this information which he divulged while passing through Winnipeg recently on his way to Kamloops, B.C., where he has a seed separating plant.

The captain stated that the Italian government has instituted a large reforestation scheme and has ordered supplies for the project from Canada. Denmark also, the captain said, imports Canadian seeds for her reforestation work which has been carried on for several years.

Even Russia has been asked for Canadian seeds, but the captain said that he didn't think that country would get any seeds from the Dominion as a deposit in negotiable securities was asked for by the Canadian company, but the guarantee was not forthcoming, although the request has been made for several years now.

Increased Immigration

Gain Over 38 Per Cent. Over Previous Year

Immigration to Canada for the first seven months of this year totalled 119,678, as compared with 86,480 for the corresponding period of 1926. This is an increase of 38.3 per cent., according to railway officials.

However, the fruit of the embargo imposed by Hon. Charles Stewart, while acting as minister of immigration, is seen in the falling off of 4,000 immigrants during July.

Western Labor authorities and others protested against immigrants coming in in such large numbers, and Mr. Stewart imposed certain restrictions, which sent the number down to 12,285, as compared with 16,227 in July, 1926.

There has been a decrease in the number of Canadians returning from the United States to take up permanent domicile in the Dominion. During the first seven months of this year, which sent the number down to 12,285, as compared with 41,189 during the corresponding months of 1926.

Annual Consumption Of Meat And Dairy Products

Canadians Are Big Users Of Butter And Eggs

In a report just issued by the Canadian Government Bureau of Statistics the consumption of meats in Canada in 1926 is estimated at 1,527,700,000 pounds. The per capita consumption of all meats was estimated at 162.27 pounds for 1926 against 161.2 pounds for 1925, and for other important products for 1926, the per capita consumption was: butter 267,361.613 pounds or 28.54 pounds per capita; cheese 35,804.476 pounds or 3.92 pounds per capita; eggs 267,355.555 dozen or 28.54 dozen per capita; and poultry 90,212.555 pounds or 9.6 pounds per capita. The per capita consumption of butter and eggs is estimated to be higher in Canada than any other country in the world.

Would Be Worth Millions

Barn fires are sufficiently numerous to warrant exhaustive research work in an effort to find a reliable and effective preventive. Practically all that is known to date is that spontaneous combustion may occur, and when it does the chances of saving the barn are slim indeed. There must surely be some special condition or set of conditions that cause a blaze, but what are they and how are they created? A real preventive would be worth millions to agriculture. —Farmer's Advocate.

Russia's Wettest Spot

The Usinsk locality of the Voronezh Province, with a population of some 10,000 people, appears to be the "wettest" spot in the Soviet Union. It is reported that during the last year it has consumed 100,000 gallons of state-produced vodka, representing a sum of \$140,000—equalling the yearly budget of the locality—not counting a similar amount of moonshine, alcohol, beer and liquors consumed.

Farmer's Advocate—Canada has never spent too much money on research and experimentation. It was the fruits of experimental work that opened up millions of land to settlers and made Canada the granary of the Empire.

Safeguards the Consumer

All Eggs In Denmark Are Stamped, Catalogued, and Indexed

As an egg in Denmark is no ordinary egg, The Danish egg has its own peculiar life history. Usually an egg ends its ordinary career upon being hatched, but not so a Danish egg. Every egg in Denmark upon birth is catalogued and indexed, so that any consumer eventually having trouble with that egg may gain redress. On the egg is rubberstamped a number, with various digits, showing the date it was laid, its hatchery, owner and hen. The excellent agricultural system of Denmark makes this possible, and the numbering of the eggs is not only a check on the efficiency of various dairies, but a safeguard to the consumer.

Faculty Of Fisheries

The First Of Its Kind That Has Been Established In Canada

A special despatch to the Montreal Star indicates that for the first time in the history of universities on this continent a "faculty of fisheries" is to be established in a Canadian institution. Dalhousie University, Halifax, is selected for the innovation, which results from negotiations between the marine and fisheries department, the biological board of Canada, and the university authorities. Dalhousie will give a course in the fundamental sciences, while the biological board will treat of fishery subjects. A governmental appropriation of \$35,000 has been made towards the establishment of a marine laboratory, the Star says.

A Smartly Simple Frock

Extremely graceful is this attractive frock and a style the home-made will find quite simple to fashion. The flared skirt is joined to the bodice having gathered at each shoulder, a vestee, and straight collar. The long sleeves may be loose, or gathered to narrow wrist-bands, and, soft now is placed at the front No. 1610 bust. Size 38 requires 3 1/2 yards 20- in sizes 36, 38, 40, 42 and 44 inches 40- or 2 1/2 yards 54-inch material, and 1/2 yard 39-inch contrasting for vestee. Price 29 cents the pattern. Many styles of smart, up-to-date frocks may be found in our new Fashion Book. Our designers originate their patterns in the heart of the style centres, and their creations are those of tested popularity, brought within the means of the average woman. Price of the book 10 cents the copy.

It is officially stated that the total British merchant tonnage lost during the war by the action of enemy cruisers, submarines, mines and other causes, but not including ships seized in enemy ports on the outbreak of war, was 7,830,855 tons.

"What steps would you take if you saw a dangerous lion on the campus?"
"Lion ones."

Palatial New Toronto Hotel

Toronto's new Canadian Pacific hotel which will be known as "The Royal Hotel." E. W. Beatty, chairman and president of the railway, finally decided on the name as being most fitting in that it associates the new hotel with the history of Toronto and conforms with the dignity and importance of the building and its splendid appointments. When completed it will be the largest and finest hotel building in the British Empire, containing over 1,000 rooms. Through a series of varying roof levels its central portion will rise to a height of 23 storeys, the crown of which will be a roof garden with facilities for entertainment. The building will extend 350 feet along the north side of Front street opposite the new Union Station. It will be built on the site of the Old Queen's Hotel. It is likely the new hotel will be completed in about a year.

For a Delightful Treat
WRIGLEY'S NIPS

SUGAR CATHEDRAL
After Every Meal

WORLD HAPPENINGS BRIEFLY TOLD

The honey harvest of Southern Alberta is expected to run to 300 tons worth about \$100,000.

A remarkable and increasing demand for Canadian food products in Great Britain is reported by Major G. B. Johnson, Canadian Government trade commissioner for Glasgow.

Canada's net debt decreased by \$63,759,157 during the first five months of the present fiscal year which opened on April 1, according to the monthly financial statement issued by the Department of Finance.

A total of 543 commercial vessels passed through the Panama Canal during the month of August, this being a new record. The previous record was 509 transits, made in July, 1927.

All the inhabitants of Turkey, including foreigners, are to be confined to their homes for an entire day on October 28, according to official regulations issued at Constantinople, fixing that date for the national census.

The beam wireless service to India has been opened to public traffic. The Government program of 1925 for linking up the British Empire by wireless is now complete, beam communication to Canada, Australia and South Africa being already in operation.

It is reported that Japanese divers at Sebastopol, Crimea, who were searching for a half-a-million sterling in gold (\$2,500,000) aboard the British cruiser Black Prince, have discovered the first gold coin. The coin bears the inscription of George III, and the date 1821.

It is expected that within six weeks it will be known whether or not oil in commercial quantities is to be added to Northern Ontario's inventory of wealth, for by that time tests which the provincial Government has been conducting in the Mattagami Valley will be completed and a report upon them made.

How Hospitals Care For Patients

Eight thousand hospitals in the United States and Canada take care of 12,000,000 patients a year or about \$25,000 a day. It is estimated five billion dollars are invested in the hospital property and in the opinion of Dr. F. S. Gilmore, head of the American Hospital Association, it now is disgraceful or criminal to die under 75 years of age. Unfortunately many persons seem or more less reluctantly obliged to in spite of what hospitals can do for them.

Rub It In For Lame Back.—A brisk rubbing with Dr. Thomas' Electric Oil will relieve lame back. The skin will immediately absorb the oil and it will penetrate the tissues and bring speedy relief. Try it and be convinced. As the liniment sinks in, the pain comes out and there are ample grounds for saying that it is an excellent article.

Planes Replacing Dogs

With aeroplanes coming into use all over Alaska for freight transportation, dogs are being used less and less on the trails. Consequently, there is an over-supply and hundreds of huskies, abandoned, have reverted to the wild state and are becoming the most dangerous kind of marauders.

BURNS

Minard's soothes and reduces the inflammation. Keep it on hand for sprains, bruises and flesh wounds.

W. N. H. 1929

Air Base in Near East

Britain Planning One At Malta To Protect Suez Canal

The British air ministry is said to be planning development of a great air base at Malta which will dominate the Eastern Mediterranean and will protect Egypt and the Suez Canal against attack.

This also is regarded as a precaution in view of Premier Mussolini's plan of developing a great military and naval base at Rhodes.

It is also known that the Nizam of Hyderabad, who is one of the greatest semi-independent native princes, is planning to establish an air service in his dominion and is sending a number of young men of the leading families to be trained for air work in England. While of course the service will be paid for out of the revenues of the Nizam, it will be co-ordinated with the imperial service in India.

France Raises Tariff

On Canadian Wheat

Notice Of Increase Has Been Received At Ottawa

France has increased the tariff on Canadian wheat from 20 cents to 27 cents, approximately, per bushel, according to official advice received from the Canadian Trade Commissioner in Paris. The higher rate comes into effect immediately.

While Canada's export of wheat to France has fluctuated from year to year, the present change on the basis of last year's export of 4,155,587 bushels will mean an increase in the total French duty collected on Canadian wheat of nearly \$280,000.

Canada, under the 1922 treaty between the two countries, enjoys a minimum tariff and most favored nations' treatment on exports to France and the increase now put into effect is due to the raising of the minimum tariff rate to all countries by France.

Naturally smart is this modish one-piece frock of slenderizing lines. Contrasting material may be effectively used for the front panel, vest, shield, low collar, and fastenings on the dart-fitted or loose sleeves. An inverted plait at each side seam provides for the necessary fullness and the narrow belt fastens with a buckle. No. 1644 is in sizes 26, 30, 34, 40, 44 and 48 inches bust. Size 38 requires 2 1/2 yards 35-inch, or 2 1/2 yards 31-inch material for the dress, and 3/4 yard 35-inch for collar, vest, shield, panel and sleeve facings. Price 29 cents the pattern.

Our Fashion Book, illustrating the newest and most practical styles, will be of interest to every home dressmaker. Price of the book 10 cents the copy.

Safety Device For Banks

A new guardian of the bank vault has been perfected from an adaptation of the microphone used during the war for submarine detection. The device does not record noises or street vibrations, but the slightest tap upon the safe it guards will send warning signals to police stations.

When a man acts like a mule the latter would be justified in kicking him.

If sometimes the tea you are using does not taste as good as it used to—just see what kind of a package it is in. No chances are taken with Red Rose. It is packed in clean, bright Aluminum.

Claims Darwin Was Right

Man Descended From Ape-Like Being Says Distinguished Scientist

Darwin was right, declared Sir Arthur Keith, the distinguished scientist in addressing the British Association for the Advancement of Science, at Leeds, England. Sir Arthur not only agreed that man had descended from an ape-like being, but he gave mankind an antiquity of 1,000,000 years.

"As we go backward in time," said Sir Arthur, "we discover that mankind becomes broken up, not into separate races as in the world of today, but into numerous and separate species. When we go into a still more remote past they become so unlike that we have to regard them not as belonging to separate species but as different genera. It is amongst this welter of extinct fossil forms which strew the ancient world that we have to trace the zigzag line of man's descent."

More Sleep Necessary

Eight Hours Required Under Strain Of Modern Life

Eight or ten hours sleep are necessary if you wish to keep fit and live to a good old age. This is the prescription of Dr. A. T. Nankivell, health officer at Plymouth, Mass., where the Mayflower landed. We crowd into our days three times as much, as our grandfathers did and the strain of modern life is far greater, yet it is doubtful if we take as much rest as they did. That may be the reason more Americans die of heart disease than of anything else. In the labor of the best is reduced one-half. A man who has had a strenuous day's work under modern conditions should sleep his eight or ten hours, says Dr. Nankivell, if he wishes to keep his youth, and keep his arteries elastic.

Alberta Sugar Beets

Expect Crop This Year Will Be Largest In History

Officials of the Canadian Sugar Factories, Limited, estimate the largest crop of sugar beets this year in the history of the industry in Alberta. The crop will be from 45,000 to 50,000 tons, in their judgment, an increase of 10,000 tons last year. The acreage has increased within the year by 500.

The Alberta Sugar Company, which already has a refinery at Raymond, is planning the erection of a second plant at Hillsprings, in Southern Alberta, where conditions of sugar beet growing have been found to be most satisfactory.

Depreciation Of Automobile

I was talking recently with a big automobile man in a dull town. We walked up a long street, and he made an estimate of the cost of automobiles parked along the way. I have forgotten the figures, but they were enormous. I recall, however, that he said the depreciation on the automobiles we saw during the walk amounted to ten thousand dollars a day. There are millions of automobiles in the United States. What is the depreciation of new ones sold every day, and of those previously sold?—E. W. Howe's Monthly.

It isn't the cost of living that worries the man behind the bars.

ENGLISH LADY TENNIS TEAM

These are the smiling members of the famous English lady tennis team, which has been giving exhibition matches throughout Canada during the past few weeks, and which is soon to sail home after contesting the Victorian Cup. From left to right they are: Joan Fry, Betty Nuthall, Esmayr Harve, Captain Hawkes, master of the Cunard liner Ascania, Mrs. D. A. Hill, and Gwendeth R. Story. They are shown on the ship in which they sailed from England to Quebec.

A Warning To Motorists

Practice Of Giving Lifts To Strangers Is Dangerous

The American Automobile Association has sent out a nation-wide warning to motorists to abandon the prevalent practice of giving lifts to strangers along the road. Pointing out that a serious national problem is being created by the kindly driver who picks up the youthful roadside traveller because more than seventy per cent of the "down and outers" later must be cared for in some charitable institution, the association also cautions the motorist on the score of his responsibility should an accident occur, inasmuch as there have been many cases in which the free-riding passenger collected heavy damages from his host.

No better advice could be given the motoring fraternity. All the dangers of "giving lifts" are not mentioned in the A.A.A. bulletin, however. There is the "stuck-up" man who, with a leer on his face, holds up his finger to "bum" a ride. If the motorist is kind he stops and calls a cheer "Top in!" The blunt accepts with alacrity, and, holding his time on the back seat ball conditions are pretexts, slurs the driver and his companion damps the bodies alongside of the road, and speeds away. In this connection it is only necessary to recall the horrible murder some years ago in New Jersey when a young couple returning from a dance graciously gave a lift to two men waiting on a street corner, little realizing that they had but a few minutes to live.

It is not safe or wise to stop at any time or any place to give a lift to anyone. If it is a young boy who hails every car until he finds one to pick him up, the chances are a hundred to one that the motorist at the end of the ride, no matter how long or how short, will get no thanks from this modern type of beggar, and that the motorist by his act is helping in the stagnation of any character that the youth might possess.

As to the question of the passenger suing his host if there is an accident, and the ease of hold-ups under such circumstances, there can be no controversy. Motorists should realize these things and stop for no one, whether in the city or in the country, because under any circumstances they are either putting themselves in grave danger or contributing to the delinquency of future citizens of this country.

Looked Like a Certainty

"Ere you are, ladies, and gentlemen," shouted the raucous-voiced tipster at the race-meeting. "What did I tell yer yesterday?" Nobody made an answer to this question, and once more the tipster began his shouting.

"What I say," that Broad Bean wasn't a runner?" he yelled. "And didn't I say that Water Tap would still be running, and that Dusty Carpet would take a lot of beating?" Still there was no answer. But the powerful-voiced man was not a bit dismayed.

"Now," he cried, "I've a certainty for you today in this race. Back Loose Hootin, it's sure to come off!"

Minard's Liniment relieves backache.

Air Patrol Covers Large Area

Approximately 165,000 acres of forest land in the provinces of Ontario, Manitoba, and Alberta were under a system of aerial protection during 1928.

Giant Icebergs

Giant icebergs, 400 feet high and eight miles in extent, were recently sighted by the master of the British Steamer Matutina, bound from New Zealand to Montevideo.

SUNDAY SCHOOL LESSON

SEPTEMBER 25

THE EARLY KINGS OF ISRAEL

Golden Text: "Jehovah hath established his throne upon the heavens; and his kingdom ruleth over all."—Psalm 104:19.

Devotional Reading: Psalm 105:1-8.

A Review By Means Of Allusions

In the fulness of spirit Nathan spoke to David, and so in a hundred voices God through that rosy company of the prophet still speaks to us, and convinces us of our sin and of his presence.—Dean Stanley.

I dare not hope with David's harp to chase the evil spirits from the troubled breast.—Kobbe.

We think of prayer for others as a privilege, but he regarded it as a duty; not to pray for his people was to him a sin.

"Latest born of Jesse's race, Wonder lights thy bashful face, While the prophet's gifted oil Seals thee for a path of toil."

"Because you cannot gain A wondrous Waterloo In life's great battle, why remain Unarmed with foes in view?"

Be not afraid, like David, take your fling, And do some humble part in conquering.—Julia M. Maly.

And his next son, for wealth and wisdom famed, The clouded ark of God, till then in tents Wandering, shall in a glorious temple enshrine.—Milton.

If I am only an instrument of gathering materials and another shall build the house, I trust my joy will be none the less.—William Carey.

His life is the tragedy of a man capable of mobility of character and of great service, who gave loose reins to his evil temper till his only ambition was to hunt and kill "a partridge on a mountain."

It seems an almost impossible state of self-deception which could let him flare out in indignant virtue against the supposed culprit, and never once dream that the case could apply to himself.—Hugh Black.

In the Way Of Trade

Matter Of Ninety-Five Dollars Meant Nothing To a Texan

In the old haggling way of trade, which has, in this country, at least, happily gone out for the most part, and been replaced by the more honest one-price system, in which a dealer puts a fair profit upon his goods and sticks to that, it was customary to demand a great deal more than the asker hoped to get.

One time on the Texas frontier a man came into a camp riding an old mule.

"How much for the mule?" asked a bystander.

"Just a hundred dollars," answered the rider.

"I'll give you five dollars," said the other.

The rider stopped short, as if in amazement, and then slowly dismounted.

"Stranger," said he, "I ain't agoin' to let a little matter of ninety-five dollars stand between me and a mule trade. The mule's yours."

Meaning Of London

Many Theories Have Been Advanced As To Its Derivation

The name London is the subject of much discussion among philologists in Great Britain.

One theory is that it means "the fort by the lake," from the Welsh "llyn," lake and "din," a fortified place. Another is that it is derived from the Norse word "Lund" (diminutive "Lundey") a sacred grove.

There is a town in Yorkshire called Lund after Lund in Scandinavia, at one time one of the chief commercial cities in Sweden. Its merchants traded with Britain in Roman times. It is thought that Lund in Yorkshire, Lund in Sweden and London, be London were probably the sites of sacred groves, where the priests of the Bronze Age offered human sacrifices to the Sun God.

Bears Make Friends With Miners

A strong friendship has sprung up between wild bears and the miners employed at the Barbara camp, B.C., 5,000 feet above sea level, where copper deposits of the Britannia Mines are being worked. The bears were driven from their usual haunts by an unusually early snow storm. When they appeared in camp they were starving and eagerly devoured the food offered by the miners. The bears quickly gained confidence and now take scraps from the men's hands without sign of fear or viciousness.

The happiness of married life depends upon the power of making small sacrifices with readiness and cheerfulness. One doesn't have to be married to know that either.

Garrett: "Do you think a travelling man can go to Heaven?"

Michael: "Not if the Recording Angel audits their expense accounts!"

Naming Mountain Peaks

Mount Stanley Baldwin Is Named After British Premier

Right Hon. Stanley Baldwin's name is to be perpetuated in Canada by a mountain peak called after him.

The geography board has acted on a suggestion of the British Columbia Government and a peak in the Rockies in that province with an altitude of 10,900 feet is to be called Mount Stanley Baldwin. It is visible from the railway through the Yellow Head Pass.

Other peaks in the same Cariboo range are to be named the Premier Group after Sir Whitford Laurier, Sir John Thompson, Sir John Abbott and Rt. Hon. Macdonald Dowie. The Laurier peak, 11,750 feet is the highest. Previously, mountains were named after Sir John A. Macdonald, Alexander MacKenzie, Sir Charles Tupper and Sir Robert Borden.

The Planting Of Trees

Arrangement Should Be Studied To Obtain Pleading Results

Indiscriminate planting of trees and shrubs around homes is "an unfortunate fraud," declares Miss Elsa Lehmann of the lecture staff of the New York Botanical Garden. Says the bulletin, in a recently issued press bulletin:

Miscellaneous evergreens are being overemphasized, and a finer understanding is needed, she says. Urging the importance of hedges and hedges, she asserts that "the beauty of the small place depends upon its enclosure, which separates it from its neighbor and makes it complete in itself." Trees, shrubs, vines, and flowers are not to be planted for themselves alone, according to Miss Lehmann, but are to be arranged and adapted to the house against which they are used.

Mothers Should Use

When The Babies Are Cutting Teeth

During the baby's teething time, in the hot months of summer, when he has loose stools and diarrhea, colic, cramps and other bowel complaints, soothe his discomfort by giving him DeWolfe's Wild Strawberry. In many cases the child wastes a sleep, and very often the termination is fatal.

This is the time when the mother should use "Dr. Fowler's," and, perhaps, save the baby's life.

It has been on the market for the past 80 years; put up only by The T. Milburn Co., Limited, Toronto, Ont.

Just What He Wanted

A story is related of an old tenant farmer, who, on paying his rent, told his landlord that he wanted some timber to build a house, and would be much obliged if he would give him permission to cut down what would answer for the purpose.

"Well," said the landlord, sharply.

"Well, then, sir," the farmer went on, "will you give me enough to build a barn?"

"No."

"To make a gate, then?"

"Yes."

"That's all I wanted," said the farmer, "and more than I expected."

After all we don't work such long hours. They're the regulation 60 minutes each.

The man with a grouch gets more sympathy than he deserves.

ON RECEIPT OF \$1.00 I will mail you

BALSAM OINTMENT

Nature's Great Remedy for Cuts, Burns, Bruises, Blisters, Chafes, Corns, Frost Bites, Headaches, Insect Bites, Itch, Rheumatism, Sprains, Stomach Aches, Toothaches, and all other ailments. It is the only remedy that will cure all these ailments. It is the only remedy that will cure all these ailments. It is the only remedy that will cure all these ailments.

THE NEW FRENCH REMEDY, No. 1

101, 103, 105, 107, 109, 111, 113, 115, 117, 119, 121, 123, 125, 127, 129, 131, 133, 135, 137, 139, 141, 143, 145, 147, 149, 151, 153, 155, 157, 159, 161, 163, 165, 167, 169, 171, 173, 175, 177, 179, 181, 183, 185, 187, 189, 191, 193, 195, 197, 199, 201, 203, 205, 207, 209, 211, 213, 215, 217, 219, 221, 223, 225, 227, 229, 231, 233, 235, 237, 239, 241, 243, 245, 247, 249, 251, 253, 255, 257, 259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291, 293, 295, 297, 299, 301, 303, 305, 307, 309, 311, 313, 315, 317, 319, 321, 323, 325, 327, 329, 331, 333, 335, 337, 339, 341, 343, 345, 347, 349, 351, 353, 355, 357, 359, 361, 363, 365, 367, 369, 371, 373, 375, 377, 379, 381, 383, 385, 387, 389, 391, 393, 395, 397, 399, 401, 403, 405, 407, 409, 411, 413, 415, 417, 419, 421, 423, 425, 427, 429, 431, 433, 435, 437, 439, 441, 443, 445, 447, 449, 451, 453, 455, 457, 459, 461, 463, 465, 467, 469, 471, 473, 475, 477, 479, 481, 483, 485, 487, 489, 491, 493, 495, 497, 499, 501, 503, 505, 507, 509, 511, 513, 515, 517, 519, 521, 523, 525, 527, 529, 531, 533, 535, 537, 539, 541, 543, 545, 547, 549, 551, 553, 555, 557, 559, 561, 563, 565, 567, 569, 571, 573, 575, 577, 579, 581, 583, 585, 587, 589, 591, 593, 595, 597, 599, 601, 603, 605, 607, 609, 611, 613, 615, 617, 619, 621, 623, 625, 627, 629, 631, 633, 635, 637, 639, 641, 643, 645, 647, 649, 651, 653, 655, 657, 659, 661, 663, 665, 667, 669, 671, 673, 675, 677, 679, 681, 683, 685, 687, 689, 691, 693, 695, 697, 699, 701, 703, 705, 707, 709, 711, 713, 715, 717, 719, 721, 723, 725, 727, 729, 731, 733, 735, 737, 739, 741, 743, 745, 747, 749, 751, 753, 755, 757, 759, 761, 763, 765, 767, 769, 771, 773, 775, 777, 779, 781, 783, 785, 787, 789, 791, 793, 795, 797, 799, 801, 803, 805, 807, 809, 811, 813, 815, 817, 819, 821, 823, 825, 827, 829, 831, 833, 835, 837, 839, 841, 843, 845, 847, 849, 851, 853, 855, 857, 859, 861, 863, 865, 867, 869, 871, 873, 875, 877, 879, 881, 883, 885, 887, 889, 891, 893, 895, 897, 899, 901, 903, 905, 907, 909, 911, 913, 915, 917, 919, 921, 923, 925, 927, 929, 931, 933, 935, 937, 939, 941, 943, 945, 947, 949, 951, 953, 955, 957, 959, 961, 963, 965, 967, 969, 971, 973, 975, 977, 979, 981, 983, 985, 987, 989, 991, 993, 995,

DOMINION NOW HAS A SEAT ON LEAGUE COUNCIL

Geneva.—Canada ended Cuba were elected to the League of Nations Council. Three seats were to be filled, and Finland got the third.

Canada, Cuba and Finland will sit for three years on the council, which now is composed of 14 members. The other members are Great Britain, France, Italy, Japan and Germany, which hold permanent seats in perpetuity, and China, Colombia, Chile, Rumania, Poland and Holland, who are non-permanent members.

The new line-up means that the council contains four countries representing the American continent and has created special interest among many delegates because of the particularly friendly relations existing between Canada and the United States. From another standpoint the election caused interest of an equally Canada is a member of the British Empire. Hence, in the view of numerous delegates, the importance of the British Empire on the council is increased, although the general impression exists that Canada will act absolutely independently, insisting upon her sovereign rights as an independent member of the League of Nations.

The three new members will take office immediately, replacing Czechoslovakia, Salvador and Belgium, whose term has expired.

Presumably Senator Raoul Dandaneau will represent Canada on the council. He was president of the 1925 Assembly; he speaks English and French with equal fluency and is popular in Geneva political circles.

Dr. Aristides Aguirre, Belthancourt, Minister to Berlin, probably will be the choice of Cuba. He has long been one of the most prominent figures in league activities and served as president of the recent International Conference on Transit and Communications.

Canada won her victory by a narrow margin, getting 26 votes or one more than the necessary majority. Cuba led the poll with 40 votes, and Finland came second with 33.

No Alberta Coal For Ontario

Finding Of Rail Commissioner Will Make Price Prohibitive

Calgary.—The finding of the commission at once kills all hope of sending Alberta coal to the Ontario market," said Jesse Gouge, Drumheller coal operator.

Mr. Gouge said that to the \$12.20 per ton mentioned as the inclusive cost "plus the element of profit," would have to be added the actual cost of coal which at \$2.75 per ton would bring the figure up to \$15.95. To that again would have to be added the profit of the retailer in Ontario which would run from \$2.50 to \$3.00 per ton. That would mean, he said, that Alberta coal would cost the Ontario consumer \$18.45 to \$18.95 per ton, at which figure it would be placed entirely out of court, as an American anthracite coal was being sold from \$15 to \$16 a ton.

"There is now no hope of exporting the Ontario market for Alberta coal," said Mr. Gouge, "as this could not be done at a ton established."

Insured For Millions

127 Persons In U.S. and Canada Carry Heavy Policies

New York.—The lives of 127 persons residing in Canada and the United States are worth \$1,000,000 or more each to insurance companies, according to a survey made public by the Spectator Company, of New York. Rodman Wamsbarger, merchant leader the list with \$7,500,000 in policies. Several persons including Dr. F. G. Manning, of Toronto, discoverer of insulin, are insured for \$5,000,000 each.

Farmers Seek Representation

Winnipeg.—Appointment of a western farmer to the Board of Railway Labor Board, whose term will expire in October, is being urged by the Commissioners in place of Commissioner of Agriculture in communications forwarded to the federal government. The council also has suggested the membership of the board should be enlarged to seven, and that at least three members should be from Western Canada.

The most illiterate country in the world is Natal, Africa, where 94.8 per cent. of the natives can neither read nor write. Egypt and Guatemala have 82.7 per cent. illiteracy.

W. N. E. 1929

Good-Will Between Canada and U.S.

No Room For Distrust Says Hon. William Phillips

Ottawa.—There is no place for distrust or misgivings between Canada and the United States, declared Hon. William Phillips, U.S. minister to Canada, in the course of a stirring address to members of the Canadian Club, and delegates to the annual conference of the Association of Canadian Clubs, at a luncheon here.

"It is an easy matter for us to understand one another," he said, "because our interests touch at some points and because already we are thoroughly well acquainted. We are in no sense foreigners to each other, yet we still have much to learn, one from the other. Already we have gone a long way on the road toward mutual co-operation but we still can go even further."

"Much of the sorrows and sufferings of the world would have been avoided in the past if nations had only found the courage to approach their international problems in an attitude of reasonableness and fair play."

"With diplomatic relations now established and with good-will manifest everywhere, Canada and the U.S. are ready, I hope, to discuss all questions of mutual concern, as they arise, cheerfully and frankly, and in a spirit of helpfulness. In so doing we shall become the happiest illustration of what we hope civilization has in store for the entire world. For between our two countries there is no place for distrust or misgivings."

Liable To Dumping Duty

New Ruling On Imported Apples Has Been Issued

Ottawa.—Imported apples have been declared liable to dumping duty. A ruling issued by the Department of National Revenue holds that apples are to be considered as of a class or kind produced in Canada until otherwise ordered.

"This means that a special (or dumping) duty will be added to the regular duty, in addition to imported apples. The dumping duty will be the difference between the appraised value and the purchase price but not exceeding 15 per cent. of the appraised value."

Typhoon Devastates Japan

Four Hundred Dead and Many Injured By Tidal Wave

Tokio.—Four hundred persons are dead, 2,200 injured, and 700 houses destroyed in Kumamoto, Island of Kishiu, in consequence of the typhoon and tidal wave, according to reports to the Japanese home office. In Fukuoka, Nagasaki, and Kanagawa prefectures there were few casualties, but numerous houses were inundated and damaged.

When the typhoon struck Tokyo several thousand houses in the low-lying sections were flooded. Thirty children were injured when the roof of a schoolhouse was blown off.

Flee From Earthquake Area

Tourists Along Black Sea Coast Crowd All Transports

Moscow.—Thousands of panic-stricken tourists along the Black Sea coast were crowding all means of transportation in order to escape from the district which has been shaken by earthquakes in the past few days, causing death and injury in many districts. Late reports from Yalta said that 12 persons have been killed there and 258 injured. Slighter shocks were still continuing in the region; the advice said, Relief measures are under way.

Should Lead the Way

Geneva, Switzerland.—The United States, France, Germany, Japan, Holland and the other drug manufacturing or producing countries should lead the way in curtailing the output of narcotics in the opinion of Colonel Daniel W. MacDonagh, of Boston, technical adviser of the Persian government, as expressed on behalf of Persia before the League of Nations social welfare committee.

Farmer Killed By Airplane

Portsmouth, Ohio.—When a passenger aeroplane, just taking off from a new airport, struck his farm wagon here, Norman Hopkins, 26, farmer, was killed. Hopkins' two sons, Glen, 6, and Oscar, 9, who were riding in the wagon, were injured.

Next Meeting At Edmonton

Saint John, N.B.—Edmonton, Alta., was chosen for the next annual meeting at the close of the fifth annual meeting of the Associated Workmen's Compensation Boards of Canada here. J. Sterling, of that city, was elected vice-president.

For Outpost Work

Miss B. R. Terry, R.N., Toronto, Ontario, nurse, left recently to begin work at the new medical outpost, All Saints' hospital, Aklaik, North West Territory, which has been opened under the auspices of the Mackenzie River diocese of the Anglican church.

POSTAL DEFICIT MUCH SMALLER THAN EXPECTED

Ottawa.—Reduction of postage rates provided by the budget of 1926 has resulted in a deficit in the Post Office Department, but it is about a million dollars less than was originally estimated.

For the fiscal year which ended March 31 last, the returns are being made up and the deficit is placed at \$1,600,000. The estimated shortage was about \$2,500,000.

It would appear from these figures that the reduction in the letter postage from three to two cents per ounce has increased the volume of letters passing through the mails.

Simultaneously, a marked increase in the parcels post is recorded and a big business is being done. Despite the one third cut in the letter rate the results of the operations under the new conditions leads to the belief that in a year or two at least equilibrium will be established between postal revenues and expenditures.

Exodus Not Serious

Only Ten Per Cent. Of University Graduates Go To States

Winnipeg.—The exodus of Canadian university graduates to the United States is not as serious as it is held to be in some quarters, according to Sir Robert A. Falconer, president of Toronto University, in an interview here.

"I went into the matter quite carefully at one time," Sir Robert said, "and I found that, according to figures I got from various universities in Canada, the emigration of graduates did not exceed 10 per cent." Sir Robert added that this exodus is not such a terrible thing as some people imagine; it supplies an outlet for our graduates. "No one, he said, would bother to obtain a university education if they did not get the opportunity to use it."

Sittings Of Railway Commission

Ottawa.—The Board of Railway Commissioners announced the following dates for sittings in Western Canada: Saskatoon, Oct. 10; Edmonton, Oct. 12; Vancouver, Oct. 19; Victoria, Oct. 22; Nelson, Oct. 24; Lethbridge, Oct. 27; Calgary, Oct. 28; Regina, Oct. 31; Brandon, Nov. 5; Winnipeg, Nov. 9; Port William, Nov. 11.

Indian-Paleface Romance

This little lady is evidently attracted to the small Indian boy and perhaps even more to the gorgeous and unusual house he lives in—a typical Stoney Indian Teepee. So she has mastered her shyness and is tempting him with a few candies. The little Chief is nothing loath to be tempted and meets her more than halfway. This pretty little incident occurred during the great Indian Day Celebrations at the Banff Springs Hotel recently and was duly registered by a C.P.R. photographer.

TAKE MEANS TO PUT AN END TO CUSTOMS FRAUDS

Ottawa.—"We have had some evidence brought before us to indicate that in certain quarters there would be a revival of illegal practices once our commission ceased to exist. For the benefit of such parties and others similarly disposed I think I can promise that other means will be devised and rigidly enforced for detecting such frauds, and that for the future when such frauds and illegal practices are discovered, they will be visited with swift and relentless punishment."

The above was one of the statements made by Chief Commissioner J. T. Brown, of the Royal Customs Commission, in a brief address at the close of the public sittings of the commission here.

"No doubt there have been some who have been guilty of defrauding the Crown of its just revenues and who have escaped the scrutiny of our investigators," he continued. "For such let me say that the mere fact that they have thus far escaped exposure and prosecution must not be taken as any assurance that such practices can be continued with impunity."

The chief commissioner's closing address, which was concurred in by his fellow commissioners, W. H. Wright and Ernest Roy, expressed sincere appreciation of the work done by counsel, auditors and others associated with the work of the commission during the many months of the inquiry. Irrespective of the report which would be prepared and submitted to the Governor-in-Council, the investigation had been worth while, said the chief commissioner.

"Two things above all appear to have been necessary under the circumstances," he said. "In the first place, an exposure of conditions as they actually existed both inside and outside the service, with an awakened and enlightened public conscience on customs matters as a result. The work of the parliamentary committee and our commission has made the exposure fairly complete. In the second place, it is essential to have a head to the department with ability to lead the country and realize the need of the necessary reforms. There is every indication that the present head of the department is such a man."

Projected Flight Cancelled

American Globe Circling Tour To End At Tokio

Tokio.—The projected flight of the American monoplane *Pride of Detroit* across the Pacific on its globe-circling tour was called off here by its captain, Edward P. Schlee and William S. Brock.

The decision to call off the flight followed a lengthy conference with aviation experts here and others interested in the undertaking. Many cablegrams from America urging the fliers to stop at Tokio also carried weight. Brock and Schlee finally concluded the attempt to negotiate the Pacific would be suicide. They will take an early boat for the United States and have their monoplane shipped home.

More Settlers For Lethbridge

Lethbridge.—The Canada Colonization Association has been so successful in the Lethbridge district that it has been decided to place another 25 families there this Fall. One of the present settlers has placed 120 acres in sugar beets, 58 acres in potatoes and 400 acres in wheat and other small grains from which his returns this Fall should be close to \$15,000. There are eight families now working for him.

Fast Steamer 'Plane Service Is Planned

Would Cross From New York To France In Four Days

New York.—The New York Herald-Tribune says that plans are nearly completed to launch an all-American combination steamship-aeroplane service between Montreal, Point, Long Island, Plymouth, England, and Havre, France, with fast ocean liners that will make the crossing in four days.

The proposed line is to be incorporated as the New York, London, Paris Steamship Company, and will operate a fleet of ten 26,000 ton liners. The ships, which will resemble United States naval destroyers but about twice their size, will be driven at an average speed of 31½ knots, but capable of attaining 35 knots. They will be about 800 feet long with an 80-foot beam and a draft of 23 feet 9 inches.

The new liners, to be used exclusively for passengers, will carry 400 first class, who will be accommodated in small cabins, slightly larger than Pullman car sleeping rooms.

Victim Of Experiment

Scientist Meets Death While Testing Effect Of Anesthetic

Manchester, Eng.—A victim of his own scientific zeal, Dr. Disney Rawson Wilson, surgeon and anaesthetist with a British and American reputation, was found dead in his laboratory. His wife discovered the experimenter with a mask over his face before a machine which administered gas mixtures.

It had been Dr. Wilson's great ambition to obtain and prolong the anesthetic state, which is obtained momentarily when a person under an anesthetic loses feeling yet retains consciousness.

Dr. Wilson's brother said the doctor believed he had sufficient will power to prevent himself from losing consciousness completely. Colleagues are of the belief that he met death experimenting on himself to discover the actual effects of an anesthetic, which it was his conviction was the only way to obtain essential data.

REQUIRE MORE TRADE ROUTES FOR THE WEST

Vancouver.—"If Canada is to achieve her proper destiny as a great nation, the people of all sections of the country must realize that new trade routes must be established and hardly any settlers, no matter what their nationality, be brought in to develop the vast wealth stored in the great northern hinterland," Premier James G. Gardiner of Saskatchewan declared in an address before the Canadian Chamber of Commerce Convention here.

"All Canadians must get a vision of what the 20th century has in store for us, then put our shoulders to the wheel and push on to the destiny that is ours," said the Premier of Saskatchewan, 25 years ago a penniless homesteader from Ontario, during his 200 address with his picture of the Canada to come.

"The most disconcerting question which can be introduced into discussions, national or international, is the proposal to change trade routes," Premier Gardiner pointed out. "Some of the greatest wars in history have been fought on that issue. I would say to those interested in opening the Pacific route—and why should it not be opened?—to those interested in opening the Hudson's Bay route, do not expect that those now operating on the established trade routes are going to admit lightly that new routes and to operate to their disadvantage or even should they do so that their opening will redound to the national interest."

Railway development in Canada was a thing of the future, not of the past, despite the great lines already constructed, Mr. Gardiner believed.

Seven-eighths of all wheat entering into international trade was produced in Canada at the present time, he said. This meant, he explained, that the prairie provinces with a population of less than 2,000,000 were feeding 16,000,000 in other countries. Yet only one-third of the land capable of producing grain had been brought under cultivation so far.

When the great remaining open spaces were populated there would be more than enough business to keep every part in the country busy for every month it could remain open, he predicted, and Vancouver, free-free all year and sole outlet for a great producing region, would be one of the greatest commercial centres in the Dominion.

CANADA MAY DECIDE TO APPLY A QUOTA LAW

Ottawa.—Renewal of the agreement between the department of immigration and colonization and the Canadian railway and steamship companies by which the latter secure transport and place immigrants in Canada has yet to be accomplished for the coming year. Negotiations are still in progress, according to the officials of the department.

While no official declaration on the subject is obtainable it is believed that there will develop considerable opposition to inclusion in the coming year's agreement conditions similar to those of the agreement now about to lapse. The views of the present minister of the department, Hon. Robert Forke, have been frequently intimated.

Wholesale immigration would regard to placement or to the capacity of the country and its industries for assimilating those admitted to the Dominion is not viewed with favor by Mr. Forke. He is, rather, a believer in the maintenance of a close balance between immigration and employment.

Holding such views it is believed to be certain that there will be some modification in the next agreement with the transportation companies. There will be more insistence upon proper placement by those companies of the people they bring to Canada and probably some further restriction imposed upon the selection of prospective immigrants by the agents of the companies.

In some quarters so much opposition has developed to indiscriminate immigration that two well known instruments are being discussed as of possible good for adoption by Canada. One is the quota law and the other is the imposition of a heavy tax upon immigrants from countries other than the British Empire, the United States and France.

The September bulletin of the Royal Bank of Canada has the following to say, in part, on immigration:

"The people who are granted admission will be the fathers of the future. Wise selection is the only means for controlling the future citizenship of the nation. It is a matter of satisfaction that so large a proportion of those who are arriving should be of British stock. Naturally, it follows that the best opportunities must be provided for the younger people who are already here, so that they will not be interested in going elsewhere. Under such circumstances, the policy of admitting people only as rapidly as they can find satisfactory employment is the one most likely to maintain a steady, healthy expansion of the country."

Woman Drowned At Sea

Carried Over Side Of British Liner

By Huge Wave

Philadelphia.—Mrs. Cyril H. Munford, 30, of Fair Acres Farm, near Hamilton, Ontario, was swept overboard from the deck of the British liner *London Mariner*, while the vessel was en route from England to this city.

The tragedy was revealed when the vessel docked here, bringing a tale of a stormy voyage and the husband and three children of the woman.

Mr. Munford, a former British army officer, was returning with his family from a tour of England, Scotland and France when Mrs. Munford, who had been on an upper deck of the vessel, was carried over the side by a huge wave.

Proposals To Outlaw War

New Idea Presented To League By Norway Delegate

Geneva.—A "voluntary universal arbitration" part was introduced at a session of the League of Nations assembly commission on disarmament by Dr. F. Nansen, of Norway. The pact created tremendous interest as a concrete development of the movement outlaw war.

The pact makes all war between signatories impossible by arranging settlement by an arbitration board of all conflicts which are not handled by the World Court or are not solved by the Council of the League of Nations.

Royal Brothers Arrive Home

Southampton, Eng.—The Prince of Wales, looking very bronzed and stiff and in excellent spirits, stepped ashore from the Empress of Scotland here, ending his trip to Canada. He was accompanied by Prince George. The Mayor of Southampton and other city and county officials welcomed the two princes, who immediately boarded the train to London.

Many Nations See Canada

Delegates To Poultry Congress Are Impressed With Inspection Trip

The special train which conveyed delegates to the World's Poultry Congress on an inspection trip across Canada completed its journey at the Canadian National Exhibition at Toronto after four weeks of travel in which about 9,000 miles were covered by rail and 1,000 miles by automobile and steamship. The party consisted of 125 persons representing eighteen different countries and was probably the most cosmopolitan group that ever toured Canada.

The excursion began at Ottawa on August 6th, immediately after the close of the third World's Poultry Congress, and covered the Maritime Provinces, returning, the special train, which travelled on the Canadian Pacific or Canadian National Railways as would suit the convenience of the guests, paid visits to important agricultural areas in Ontario and then sped westward over the northern route. One of the most interesting calls was at Kapuskasing, Ontario, several hundred miles north of Toronto but yet in the latitude of the great grain-growing areas of Western Canada. The Experimental Farm at Kapuskasing was a revelation in its demonstration of the possibilities of a great area of country which has only recently begun to come under cultivation.

The chief centres of Western Canada were visited, including stops at popular resorts in the Canadian Rockies and a couple of days at the important east cities of Vancouver and Victoria. Return to Toronto was made by way of Canadian Pacific north line and a brief visit to Hamilton and Niagara Falls was made over the Canadian National Railways.

Throughout the entire journey the delegates never ceased to be impressed with the wonderful productivity and opportunity afforded by agriculture in Canada. Next to these the subject which drew most favorable comment was the provision, which has been made for universal education and for specialized education along agricultural lines. Many residents of old European lands cast envious eyes upon the equipment and facilities which Canada has provided for the education of her rising generations.

Most significant perhaps was the spirit of goodwill which existed among the representatives of the eighteen different countries included in the trip. The largest representation was from Great Britain and the next largest from the United States, but many European countries also had delegates aboard. There were also delegates from Bermuda, Egypt and Australia. All of them returned to their homes, not only enthusiasts over Canada, but also propagandists for the extension of that good-will among the nations of the world which is best promoted by friendly contact and understanding.

Reindeer Meat

Dominion Reindeer Company Opens Office At Saskatoon

With the creation of a branch office of the Dominion Reindeer Company at Saskatoon, the first step is taken which gives Saskatchewan connection with one of the latest industries, the production of reindeer meat for food. L. T. Howie, vice-president of a \$500,000 company operating under a Dominion charter announces that headquarters of the company will be moved from Vancouver to Saskatoon.

"The reason for moving the headquarters, he explained, was that Saskatoon offered the greatest available point to the base of operations—the feedlot grounds near Great Slave Lake. Prince Albert was also considered. With the completion of the Hudson Bay line another line of transportation will be added. The company is planning the creation of packing and canning plants in the near future.

Cow Eats Grass

The little village of Staffeldton, near Bremen, has a cannibal among its herds of cows, according to the Weser-Zeitung. This unusual cow discovered a crate of wheat standing before the barn, ready for shipment. She repeatedly dropped the hay she was chewing, edged her way up to the crate, and leisurely munching five glasses before the farmer discovered what was happening.

Vietnam politician I haven't seen you husband, Mrs. Wepo, at one meeting for a long time. I hope he hasn't been unkind to me?" Mrs. Wepo—I shouldn't wonder, sir. He buys out these patent medicines.

The blacks of Africa and their fat-headed descendants in any part of the world never increase.

Health Education Is Necessary

Through the Canadian Social Hygiene Council, Dr. M. M. Seymour, deputy Minister of Health for Saskatchewan, makes the suggestion that the study of health be made an essential part of the curriculum in every class of every Canadian school.

In the bare suggestion, there is probably nothing new. It is in the manner in which the work would be carried on that Dr. Seymour's proposal differs radically from any other yet put forward.

He proposes that two minutes only, at the beginning of each school day, for example, be devoted to it.

The teacher, he suggests, might read a daily health lesson. It need not be longer than two hundred words and could be even shorter.

Dr. Gordon Bates, General Director of the Canadian Social Hygiene Council in discussing the question, noted that sex hygiene would probably be one of the subjects not dealt with in such a series. The result of the Council's investigations into the matter had been that this problem was one to be met in the home, not the school room. His organization, therefore, had prepared a series of simple text books which parents could use and which supplied all the necessary information.

"We have just begun to realize," he said, in commenting on Dr. Seymour's suggestions, "that it is essential that every adult Canadian be equipped with scientifically correct information regarding health. A certain measure of health-education is as necessary as knowledge of elementary arithmetic.

"Various organizations, voluntary and official, are now striving, throughout the Dominion, to impart this information to the present generation of Canadian citizens. It is a difficult problem. There are no existing facilities in this or any other country for educating adults. Yet, this education we all must have.

"To glance at the economic aspects of the matter, it is costing us many thousands to impart this knowledge to grown-up Canadians. It could be taught just as effectively to school children and adolescents and, through the schools, in a much simpler and much less costly manner.

"To continue the economic argument, this teaching is necessary if we are to gain control over preventable disease and preventable disease is the cause of our most staggering economic loss today. We have 90,000 Canadian uselessly ill each day. We lose 10,500,000 working days unnecessarily each year and we spend, during the same period the sum of \$270,000,000 in caring for our sick in institutions—half of which is preventable."

Alberta Coal For Eastern Canada

Would Save the Country Huge Sum Annually Spent in Importing Coal Mayor Foster of Toronto states that in all probability there will be a seven dollar freight rate for Alberta coal to Ontario. He discussed the matter with Premier Bowser, A. of Alberta, who was in Toronto recently. His worthiness said that this would enable Alberta coal to be sold in Toronto at \$12 or \$13 per ton.

"I think we are going to succeed. It will be a wonderful thing to save the country \$100,000,000 annually spent in importing coal into Canada," he said. "Householders in this city are at present paying around \$16 a ton for imported anthracite.

Uses Of Adhesive Tape

Rubber gloves, shoes and table cloth can be repaired with adhesive tape applied to the under side of a cut or break. It will protect the forefinger and thumb when picking fruit or hard vegetables; apply pieces of it to both. When ripping seams with a knife or razor wrap the blade with the tape to within an inch of the end and prevent injury to fingers or fabric. A box in which furs or woolens are stored can be made dust-proof by applying the tape to the seams; and after undressing for glass or china it is excellent for holding the parts in place until they are thoroughly dry.

Plan To Fight Grasshoppers

Steps are being taken now in B.C. to locate the egg beds of grasshoppers so that next spring they can receive a liberal supply of poison bait when the insects hatch out. Without these precautions a bad situation is predicted for the Chilcotin cattle country. Fears of a grasshopper plague in the Peace River country were dispelled this year when heavy rains drowned millions of the insects shortly before hatching.

Peel—Have you the umbrella I lent you?

Piper—No, I lent it to a friend.

Peddler—That makes it very awkward for me, as the man who lent to my friend tells him that the owner wants it.

A Russian Illusion

Leaders Believe Outside Governments Are Controlled By Big Business

The realization that oil has become the all-important fuel is reflected in a constantly-increasing struggle for its control. Russia has been able to make some very advantageous deals because of her oil resources, having contracted with the Standard Oil Company of New York and the Vacuum Oil Company to take more than 40,000,000 barrels annually.

Russia's idea in doing this was not only to raise cash with which to purchase supplies from abroad but to embarrass England as Stalin made clear in a recent speech.

It is the hope of Russian leaders to create a friendly sentiment in England and America by offering trade opportunities, especially to large concerns.

They have the illusion that the press and politics of outside countries are controlled by big business and that if they can make a favorable impression on big business they can get what they want from the governments. This is a new but none the less dangerous type of Russian propaganda.

A National Menace

Jazz At Mealtime Ruins Digestion

Says Cleveland Scientist Dr. Charles M. Newcomb, Cleveland dentist, has made the startling claim that jazz, at meal times is about as bad a thing as can happen to the digestion and now the radio has made it a national menace.

The jolly little nerve centres, upon which depend so much in the way of digestion, get to jittering about, and under the jazz influence cannot wrangle the food evenly and the digestive ducts suffer. There is nothing in the human body that can suffer as keenly or as frequently as digestive ducts.

Jazz is exciting. Some of it is fearful and some makes people want to fight. At least it diverts the good old man's attention from its work. We cannot agree with the doctor that this may not in some cases be a good good thing.

Anything, from a fire to a riot or a boiler explosion, that can attract the attention of the pneumogastric nerve from the food served in some restaurant should be quite welcome.

Makes Typhoons To Order

U.S. Invention Can Supply Gentle Breeze Or Regular Hurricane

The Bureau of Standards of the Department of Commerce has a new invention that enables Government experts to create a big wind—a regular hurricane. Typhoons are made to order, the purpose being to obtain information for use of architects, automobile designers, ordinance makers, builders and architects. A large model of smoke stack, with properly constructed curves and elbows, has been constructed for the artificial storm. Blows range from gentle breezes to sweeping currents at a top speed of 150 miles an hour.

Baby Deer Pays Visit

Jauff Springs Hotel, in the heart of the Rockies, attracts the best of travelled society from all over the world and it would appear that this member of the Younger Set is also anxious to break into the elite of society. Any way, whatever the reason, she turned up one fine morning grazing on the lawn just outside the famous hotel, and at once had a great success. Everybody seemed enthusiastic about

The Vast Pacific

Nearly Twice the Size Of The Atlantic Ocean

Painting the background of vastness against which the deliberations of the conference on Pacific Relations were to be set, Dr. Herbert E. Gregory, Director of the Bishop Museum of Polyesian Research at Honolulu, delivered an address on the "Geography of the Pacific" at the opening of the July sessions. Dr. Gregory said:

"The Pacific Ocean is a huge affair; it is long and wide and deep. From the Bering Strait to Wilkes Land on the Antarctic Circle the distance is 9,200 miles and along the equator the distance is 10,000 miles—two-fifths of the circumference of the earth and more than three times the width of the Atlantic.

"These great stretches of water form the axes of an area comprising more than 55,000,000 square miles (the area of Canada is about 3,315,617 square miles).

"The Pacific is nearly twice the size of the Atlantic and greater in area than all the continents and islands combined. The volume of Pacific water is incomprehensibly great.

"If all the lands above sea level—plains, plateaus, and mountain systems—were piled into the Pacific they would sink to the bottom and be submerged at a depth of about 12,000 feet.

"If the water were drained from the Pacific the desert from the present shore line to the floor of the deepest valley would be greater than the present ascent to the loftiest Himalayan peak."

Messages Through Nervous System

Recent Researches Throw New Light On Nerve Impulses

When you burn your finger does your brain learn by a sort of radio or electric wave that transmits the message through your nerve system? That was the old belief, based on the fact that stimulated nerves had never been found to give off heat. New Researches by Dr. A. V. Hill, of Cornell University, reported in Popular Science Monthly, have shown that the opposite is probable—that an impulse travelling along a nerve is a high-speed chemical reaction. Using an electric heat-measuring device to record temperature changes of one twenty-millionth of a degree, Dr. Hill found that a nerve gives off a minute quantity of heat when it reacts.

"How about a little remuneration for my efforts?" the vagrant minstrel asked.

"Sure thing," the Scotchman replied. "What do you want me to sing?"

"Parasol ants" derive their name from the fact that they cut large pieces out of leaves and then pinch along carrying the pieces over their heads like umbrellas.

"This fluff," urged the girl at the glove counter, "is fine for cleaning kids."

"I wash my baby," responded the woman customer, with some hauteur.

Standards Of Thrift Vary

But Everyone Should Make Ample Provision For Future

"It doesn't pay to worry about the future. The things we dread seldom happen. It's better to take life as it comes and not burden ourselves with thoughts about the years ahead."

There are many whose creed of life is something like this and it leads them along a very treacherous and dangerous pathway. It doesn't pay to worry, perhaps, from the standpoint of conjuring up imaginary woes or misfortunes. But there is a great difference between worrying about the future and facing life's possibilities in a sensible manner.

"The Japanese have a proverb which says: 'Success and happiness are the beautiful flowers that spring from the plain brown bulbs of thrift and savings.' The point of this talk on thrift is to point out the difference between planting the honest bulbs of thrift and neglecting entirely to make provisions for the future.

"Too many of us are apt to think of thrift only in terms of plain, brown, unattractive bulbs, without thought of the beautiful flowers that come from them. And the sequence of thrift and personal advancement is just as true as the sequence of bulbs and life.

To maintain that one can go through life with absolute disregard for the fundamentals of right living and prudent habits, and still continue to thrive is as false a doctrine as would be the suggestion that the flowers could live and grow without the bulb.

There are varying standards of thrift, according to individual circumstances and conditions. But living beyond one's means, squandering one's time, energies and health, and thinking only of present moments without plan or preparation for the later years, are practices that cannot fail to bring ruinousness in the end. Unless the flowers of your success and happiness are rooted in the plain brown bulbs of thrift, the day of their passing is sure to come. — S. W. Straus, President American Society for Thrift.

The Dignity Of Work

When Rightly Done It Is A Great Character Builder

If you are to be happy in this life, respect your work. Never feel above it. Put your heart in it. See the poetry in it. Work with a purpose. Do it with your might. Go to the bottom of it. Do one thing at a time. Be larger than your task. Prepare for it dispassionately. Make it a means of character building. Do it cheerily, even if it is not congenial. Do it in the spirit of an artist, not an artisan. Make it a stepping stone to something better than it has ever been before. Make perfection your aim and be satisfied with nothing less. Do not try to do it with a jerk of your arm—the weaker part. Keep yourself in condition to do it as well as it can be done. Believe in its worth and dignity, no matter how humble it may be.

Recognize that work is the thing that dignifies and enables life.

A Natural Fly Killer

Oil From Castor Plant Is A Perfect Insecticide

A recent number of the "British Medical Journal" contains a description of the accidental discovery of a natural fly-killer. A castor oil plant was placed accidentally in a room swarming with flies, which, of course, came in in hundreds through the open window, but as soon as it was deposited in its place the flies disappeared as if by enchantment. Oil examinations they were found under the castor oil plant or clinging to the under surface of the leaves, perfectly dead. The leaves, it is said, give out an essential oil or toxic principle which possesses the strongest insecticide qualities.

Would Not Take Long

Bearing in mind the fact that the once far-flung Austro-Hungarian Empire has been split up into a number of small States, of which Austria proper is by no means the largest, the following story—which was told by M. Briand, the French Prime Minister—strikes me as distinctly funny.

Two Austrian officers—said M. Briand—found themselves one bright day with nothing to do.

Said one: "How shall we pass away the time this morning?"

"Well," suggested his friend, "suppose we take a walk across the Empire."

"All right!" agreed the other. "But what shall we do in the afternoon?"

There are still those who say that it is better to have loved and paid the cost than never to have loved at all.

Canada's Mineral Resources

New Canadian National Railways' Publication On World Deposits From Coast to Coast

While the world is recording a decrease in the production of gold, Canada is gradually showing an increase and is rapidly reaching second place as a source of supply. It is stated in a new publication covering mines and mineral sources of the Dominion of Canada, now being issued by C. Price-Green, F.R.G.S., Commissioner, Department of Natural Resources for the Canadian National Railways. The booklet, which is now available for distribution, deals extensively with the mineral resources of the Dominion, both metallic and non-metallic, and points out that "the value of our mineral production has risen from less than \$23 million to over \$241 million in 1925; our waterpower developed, the potent force behind our mining, pulp and paper and general industrial development, has risen from a few thousand horse power to 4,556,000 h.p.; the export of pulp and paper, from practically nothing to \$172 million; and our foreign trade from \$221 million to over \$2,000 million, representing the largest per capita export in the world. Many other examples could be given, but these alone explain why Canada's progress is inspiring so much confidence in investors at home and abroad."

Dealing with the pre-Cambrian Shield, which stretches from Labrador almost to the basin of the Mackenzie, the introduction to the booklet states: "The major portion of this area is unsurveyed and unprospected; still sufficient is now known of its geological structure to provide evidence of its latent wealth. The copper-gold deposits of Northwestern Quebec; the nickel-copper mines of Sudbury; the silver of Cobalt, South Lorrain, Miller Lake and Gowganda; the gold of Porcupine, Kirkland Lake and areas contiguous in the provinces of Manitoba and Quebec; the iron, gold, silver and other ores of Thunder Bay and Baby River mining districts; copper, gold and various other minerals in The Pas district of Manitoba, all give some idea of what the future holds in store for Canada, within the folds of this great region—the greatest single exposure of pre-Cambrian rock in the world—greater than all others combined. In view of what is said in the foregoing as to the nature of the formation of the Archean Shield, it is, indeed, probable that phenomenal discoveries will continue to be made from time to time. It must be borne in mind that the great bulk of the world's wealth has been done by men who have more or less, rapidly covered the country contiguous to its waterways."

Empire's Deposits Of Manganese Ore Large

Chief Producers Are India and Africa Says Nated Metallurgist

Two papers were prepared by Sir Robert Hadfield, the distinguished English metallurgist, for the meeting of the Empire Manganese and Mineral Congress held at Sydney, N.S., on September 9, but the author himself was unfortunately not able to come to Canada to attend the meeting.

Sir Robert is perhaps best known as the discoverer and inventor of Canadian steel. The second of the war years from 1882, but it was not announced until 1888, in a classic paper he communicated to the Institution of Civil Engineers, London, England. It is not too much to say that this discovery revolutionized the steel-making industry, and as a result manganese ore has become indispensable.

Sir Robert showed that the British Empire possesses large resources in such ores—larger in fact than those of any other country. The deposits are mainly in India and Africa (Gold Coast), production from which in 1925 was respectively 718,000 tons and 325,000 tons of high grade ore. Russia (Gorobah) with 512,000 tons, and Brazil with 307,000 tons, are the other main sources of supply. In Canada no large manganese-ore deposits are known although 10 years ago there was an average production of about 1,500 tons from the Maritime Provinces.

The aviator was explaining the use of the parachute to a group of Easterners.

"And what would happen if it failed to open after you jumped off?"

"Oh, that wouldn't stop me," replied the aviator; "I'd come down just the same."

Jerry—"Can you give me a little money?"

Ted—"Sure, how little?"

"Mild Marian," who lived in London about 40 years ago, was 8 feet 2 inches tall.

"Well, there goes twenty-seven holes this afternoon. Want to stop—are your feet wet?"
"I should say not! Do YOURS ever get wet when you've polished them with

PAINTED FIRES

BY NELLIE L. McCLUNG

COPYRIGHT, CANADA, 1925

CHAPTER VIII.—Continued

The Wymuths were exactly the same type,—black-eyed, pale, anemic, with lustreless thin, black hair, through which a bloodless scalp showed. "Bloodless," said teeth—no, not false—everyone could see what they were—artificial, rather—so white they were almost blue. They believed in hell and spoke of the "world" in a tone which implied both horror and contempt. They knew that Christ was coming soon to take his own out of the world, leaving the other odd millions to their well-merited punishment.

Mr. Wymuth satisfied the Board that he believed in discipline for wayward girls—discipline, repentance, and after that a life of meek and lowly spirit.—"And," said Mr. Wymuth, my wife will be guided by me entirely," at which Mrs. Wymuth bowed her head and drew her thin lips more tightly over her blue teeth.

The Board breathed more freely. "It will be better now," said Dr. Smythe, "and I think it will be well to have the pastors appeal to the ladies to have a series of talks to raise money for the additional salary. I am sure the ladies will take care of it."

It was to the Girls' Friendly Home (under the Wymuth rule) that Helmi finally was committed. If she had been of the full age of eighteen years she would have been sent to jail.

The police matron, a silent woman, who held her job because she was too timid, came with her on the car. Helmi, with her clothes in a little green valise which Miss Abbie had given her, walked confidently down the path which led to the big oak door. The former matron's flowers bloomed at each side of her. They nodded a welcome to her, and she felt reassured and comforted. It must be a nice home where there were no many doors. Helmi had put on her pinstriped skirt and white middie, which now had the monogram on it, just like the other girls. She wore it today, because it had always brought her a good time and was full of the vibrations of fun and fellowship. The Blue and Gold Todd was in her valises, and her English learning book too. She would be all right, and Miss Rodgers would come, and the girls, too.

Helmi had not yet given up hope that Mrs. St. John would come to her aid when she was better. She still thought of her as she had last seen her, heavy-eyed, distressed, ill, and told herself over and over again that

EXPECTANT MOTHERS

Read Mrs. Menard's Letter. Her Experience May Help

Chatham, Ontario.—"I want to tell you how much good your medicine has done me. Before my baby came I felt so weak and run-down that I could hardly do my work. My head ached continually and I was so discouraged that I could cry from morning till night. Had another baby just one year and a half old and it gave me a lot to do. So I thought I'd try E. Pincham's Vegetable Compound, as I had read so much about it in the little books. I found a difference right away as my head was relieved and my tired feelings gone. My sister had been doing my washing and she continued doing it, as she said it might set me back if I started to do it again. It sure did help me and I had taken just two bottles when my baby came. He is a fine big boy, now nearly five months old. I am taking your medicine again and I am able to do my work all by myself now. I always recommend the Vegetable Compound to women, and especially to expectant mothers, as I believe they need help at those times."

Mrs. OLIVER MENARD, 24 Harvey St., Chatham, Ontario.

W. N. E. 1699

Helmi, trust me—I'm your little mother." She came over to the girl and laid her hand on her shoulder. Her touch made Helmi shiver, and when she bent nearer Helmi drew away from her.

"I will not tell," said Helmi again. Mrs. Wymuth drew her lips tightly over her two plates. "Well see," she said, and Helmi knew it was a threat. That night Helmi told the girls at supper. The table had been turned diagonally across the room to get greater length, and it had a clean cloth, although it was not Sunday; Mrs. Wymuth had expected a visit from some members of the Board.

"Now, girls," said Mrs. Wymuth, in her sweet way, after a lengthy blessing had been called down from on high, "we have a new girl, Helmi Mlander. She has come to us for a while, and I want you to be very good to her, and very kind. Let her know she is among friends here. Helmi and I have had a little difference already, which I wish to tell you about. In order to help her, I must know her whole story, and this she refuses to tell me. I have coaxed her, but she remains stubborn. Isn't she foolish, girls? I am here to help every girl, but the girls must let me. Isn't she foolish, girls?" she repeated.

"Yes, Mrs. Wymuth," said the girls in chorus. But they said it listlessly. Their days of mourning for the other matron were not ended.

Then Mrs. Wymuth proceeded to tell the story, the girls listening open-mouthed. A new girl's story was always interesting.

"Now we will all pray that Helmi's stubborn spirit may be melted. You will all pray, won't you girls?"

Helmi sat looking from one to the other helplessly. Had she not one friend anywhere?

Every night after the evening meal there followed this orgy of prayer, when every girl who wanted to stand with the matron prayed. Much of it was meaningless, but as the prayers went on a certain excitement held hold on them, and in their supplications they forgot that other ears than God's were listening, and unconsciously they revealed what Helmi would be swept into the whirlpool of excitement, and would tell what she wanted to know. Helmi sat still and listened, but refused to pray.

(To Be Continued)

From Personal Experience

New York Man Quite Convinced Scotch Air Tight

There is one man in New York who does not have to be convinced that the Scotch are "tight." He knows it—from personal experience in Scotland.

This man is Alex Smith, the famous golf professional. And this is the story: Last spring, when George Duncan, the Scotch golfer, was over here visiting Smith, and he not only won Smith's famous golf stockings—and other articles of his apparel—but wore holes in them. However, he said that when Smith visited him in Scotland he would show him the time of his life.

This summer Smith went to Scotland and visited Duncan. To entertain his American guest the Scotchman invited two attractive young ladies to dine with them. He ordered an expensive dinner, but when the waiter brought the check he passed it to Smith.

"We'll go fifty-fifty on this," he said, in all seriousness. I furnished the ladies and you pay the check," Smith admits he's "crook."

Worms sap the strength and undermine the vitality of children. Strengthen them by using Mother Graves' Worm Expeller to drive out the parasites.

Testing Big Sealplane The Westminster Gazette announces that the British ministry is trying out a 3,000 mile special sealplane development flight in the Baltic with a fleet of experimental flying boats as exhaustive tests for naval and commercial transport work. It is hoped, the Gazette adds, that the trials will involve huge all metal aerial battleships to act as the eyes of the fleet.

The movement of the human eye is controlled by six muscles.

New Home Ready

Prince Of Wales To Take Up Residence In Marlborough House

The Prince of Wales will go into residence at Marlborough House soon after his return from Canada.

Marlborough House, an almost square, solid red brick building, was built by Sir Christopher Wren just over 200 years ago for the first Duke of Marlborough. Later it became the residence successively of various members of the royal family, and finally was acquired for King Edward VII. then Prince of Wales.

The present Prince of Wales will actually use only a small portion of the house himself. His suite will be on the first floor, which looks out on two acres of garden. A large room, which was formerly an audience chamber, will be converted into a combined reading room and study where the Prince will conduct the principal part of his correspondence. On the ground floor is a large room which will be used for the entertainment of friends who are not of the Prince's intimate circle.

Queen Alexandra's boudoir and bedroom will remain exactly as they were in her lifetime, as will also the four state rooms with their pictures and tapestries. The same course was followed with regard to the Victoria Rooms at Osborne House, Isle of Wight, where she died—although her death took place more than a quarter of a century ago and although Osborne House as a whole has been put to different uses—remain as they were in her lifetime.

Duty On American Publications

Forty-Nine American Periodicals Declared To Be Dutiable

Forty-nine American periodicals have been declared by the Canadian department of national revenue to be dutiable at 25 per cent. Hitherto, they have been entering Canada free of customs duty, as magazines. The periodicals run the whole gamut of thrill, romance and adventure from stories of the underworld to stories of the screen. They tell tales of the dream world and unravel the mysteries of crime.

The decision, in its formal language, holds that "periodical publications, consisting almost wholly of fiction, and not containing a reasonable amount of critical and descriptive articles, news items or articles relative thereto or to current topics declared to be not entitled to entry under tariff item 184 as magazines."

Tariff item 184 provides for free entry of magazines; periodicals, held to be not classifiable as magazines, will be charged a reasonable amount of critical and descriptive articles, news items or articles relative thereto or to current topics declared to be not entitled to entry under tariff item 184 as magazines.

It is usually safe to say that when a child is pale, sickly, peevish and restless, the cause is worms. These parasites range the stomach and intestines, causing serious disorders of the digestion and preventing the infant from deriving sustenance from food. Miller's Worm Powders, by destroying the worms, correct these faults of the digestion and serve to restore the organs to healthy action.

Some Curious Lakes

Five On Peninsula In Caspian Sea Have Peculiar Features

On the Mangishlak peninsula, in the Caspian Sea, there are five small lakes. One is covered by salt crystals strong enough to allow a man and horse to cross the lake on foot. Another is as round as any circle, and of a lovely rose color. Its banks of salt crystal form a setting, white as snow, to the water, which not only shows all the colors from violet to red, but from it also rises a perfume as of violets. Both the perfume and the color are the result of the presence of seaweeds.

Used by physicians—Minard's Liniment.

Forest To Printing Press

In order to show how quickly a tree could be transformed into a newspaper, three trees near a large paper mill were recently cut down at 7.55 a.m., swiftly rid of bark and pulped. They were then machined into a roll of paper, to cross the lake on foot. Another is as round as any circle, and of a lovely rose color. Its banks of salt crystal form a setting, white as snow, to the water, which not only shows all the colors from violet to red, but from it also rises a perfume as of violets. Both the perfume and the color are the result of the presence of seaweeds.

Aids Settlement In West

The Canadian Colonization Association, a subsidiary of the Canadian Pacific Railway for the settlement of privately-owned lands in Western Canada, in the first six months of 1927 accounted for the placement of 401 families on 97,931 acres of land.

Girls admire promising young men, but everybody else prefers those who pay cash.

Dinner Sent By Air

Reno Rancher Ordered Sixty Plate Meal From San Francisco

The St. Francis Hotel at San Francisco received an order for a sixty-plate dinner to be delivered by aeroplane at the home of W. H. Moffit, cattle rancher near Reno, Nev.

Arrangements were made by telephone from the Moffit ranch to forward the meal in an express aeroplane, with electric heaters to keep the food hot, a head waiter to superintend the serving, and two aviators properly attired to serve.

A DOCTOR'S PRAISE

A Noted Doctor Strongly Endorses Dr. Williams' Pink Pills

The test of any remedy lies in its acceptance and employment by the qualified medical practitioner. No less an authority than Dr. Andrew A. Clark, physician to the Royal household, writing on the subject of anæmia, impoverishment of the nervous system, and disorders attributable thereto, strongly endorses Dr. Williams' Pink Pills, recommending them as a remedy to other doctors.

"For several years I have made use of Dr. Williams' Pink Pills in my work and I have always found them efficacious in the treatment of disorders due to impoverishment of the nervous system, anæmia, and neurasthenia, stomach weakness, retarded development in young women, and irregularities. There is no lack of tonic resources, but in my experience no one of them manifests a superior efficacy to that of Dr. Williams' Pink Pills."

No more conclusive evidence of the value of Dr. Williams' Pink Pills could be asked for or given, than is found in the above endorsement of this noted European physician. Besides this, however, this medicine has gained the wide public confidence for more than a third of a century and has brought relief to thousands and thousands of weak and suffering people.

Try Dr. Williams' Pink Pills for anæmia, rheumatism, neuralgia, nervousness and stomach trouble. Take them as a tonic if you are not in the best physical condition and cultivate a resistance that will keep you well and strong. You can get these pills through any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Little Helps For This Week

Let the word of Christ dwell in you richly in all wisdom.—Col. 3:16.

'Tis not the skill of human art—Which gives me power my God to love;

The sacred lessons of the heart—Come not from instruments below;

Love is my teacher.

—Madame Guyon.

Every great teacher or leader lays stress on some single word of might, the key, as it were, to his position. Buddha's great word was "reconciliation." Zoroaster's, "purity." Menon's was "justice." The key to Confucius was "moderation." Moses emphasized "law." Plato, "harmony." Socrates, "reason." The strong word of Epictetus was "reliance." Antoninus, "self-possession." But Jesus gave us the key to the inner chamber of His heart in a single, mighty, sweet word,—"love"—O. B. Frothingham.

Merely a Signature A member of a congregation, becoming angry at a sermon the minister was preaching, wrote the single word, "Foot" on a sheet of paper, called on him to him, and had it delivered to the minister in the middle of his sermon. The minister opened the paper and read what was written. Then he said: "An unusual thing has happened. A member of the congregation has signed his name without writing the letter."

Andent Egypt's sacred lotus was in reality a water lily.

Queen Alexandra's interesting collection of photographs taken by herself has just been bound. Her late Majesty had a great gift of seizing a good picture, and would have made a name in this line were she born in a less exalted position. The collection are pictures of every royalty in Europe, for more than half a century. Up to a few years before her death she kept up her interest in the camera.

Hard and soft coons both yield to Holloway's Corn Remover, which is entirely safe to use, and certain and satisfactory in its action.

Queen Alexandra's interesting collection of photographs taken by herself has just been bound. Her late Majesty had a great gift of seizing a good picture, and would have made a name in this line were she born in a less exalted position. The collection are pictures of every royalty in Europe, for more than half a century. Up to a few years before her death she kept up her interest in the camera.

The towel absorbs its supply of water through the skin, seldom, if ever drinking through its mouth.

Cuticura Soap Shampoos Keep the Scalp Healthy

Regular shampoos with a suds of Cuticura soap and hot water, preceded by light applications of Cuticura Ointment, are most effective. They do much to cleanse the scalp of dandruff, allay irritation, stimulate circulation and promote the healthy condition necessary to a luxuriant growth of hair.

Sample Free by Mail. Address: Cuticura Soap Co., Portland, Me., U.S.A. Price, 50c per box. Cuticura Shaving Stick 25c.

Andent Egypt's sacred lotus was in reality a water lily.

The Chinook Advance

Follows Route of Empire Founders

1. View of the locks at the "Soo". 2. The S.S. Asinibola locking through at Sault Ste. Marie. 3. Transferring from train to ship. 4. Port McNicoll's line harbour showing grain boats and elevators in the background.

Centuries before the railways, the automobile, the trolley car, or the aeroplane, the Great Lakes were the highways, and canoes the popular vehicles of transportation, exploration and conquest. Leaving Montreal, Quebec and other points, the great La Salle, Marquette, Hennepin, Radisson and Mackenzie, a gallant crew of explorers and adventurers, passed through the Great Lakes on their way to found Illinois, Indiana and other states of the Middle West. La Salle who went from Quebec to the mouth of the Mississippi and paddled his way back, made the Great Lakes his highway. He and his dauntless companions, and lost an empire. The hardships of these early explorers have been done away with in modern travel on the great Lakes, but glamour of their expeditions and the beauties of their route still remain. Aboard one of the Canadian Pacific lake steamers like the Asinibola or the Keweenaw in the heart of the continent, the fresh water sailor leaves Port McNicoll situated on the shores of the Georgian Bay, passes the entire length, through Lake Huron and the famous "Soo" canal and locks and into Lake Superior. The journey requires only two days and is through one of the most picturesque parts of the Dominion.

The Port McNicoll-Owen Sound journey, aboard the Asinibola, is another delightful trip. The latter port is located on the shore of Georgian Bay, and is one of the finest harbours on the Great Lakes. The journey from here to the "Soo" is beset with scenic beauty, along the rocky coast of the Bruce Peninsula that stretches away to the north towards Manitoulin Island. The great cliffs of this peninsula rise up over 100 feet from the deep clear waters of the Georgian Bay.

From Port William, one of the greatest grain centres in the world, the traveller may proceed westward across the prairies. Few transcontinental journeys can offer such a delightful diversion in travel as the Great Lakes trip. The traveller can board the steamers at Port McNicoll, travel one fifth of the way across the continent and then resume his rail journey at the head of the Lakes.

Threshing Will Be General This Week

If the present fine weather continues many machines will be busy threshing this week. Otto Peterson, of Rearville, commenced threshing on Tuesday, while several owners of threshing machines around Chinook are planning to start up on Friday or Saturday.

Work On Hudson Bay Railroad Progressing Toward Churchill

The bridge crossing the Limestone River at Mile 350 on the Hudson Bay Railway will be completed by the middle of this month according to a statement made by H. A. Dixon, chief engineer of the Canadian National Railways, who is in charge of the construction of the road. As soon as the bridge is finished track laying will be started from the Limestone River to Mile 356.5, the new junction point to Port Churchill.

In the meantime a location party is in the field locating the line towards Churchill and as soon as the track is laid to Mile 356.5, work will be started in clearing, grading and ditching the line towards Churchill. It is expected that the work will be continued into December before weather conditions interfere.

All summer more than thirteen hundred men have been engaged ballasting, widening, lifting, filling and ditching on the Hudson Bay Railway between The Pas and Mile 350 the present end of steel. Considerable progress has been made and the track for almost all of the distance is in first class operating condition. Three steam shovels are being used in this work. In addition the two bridges over the Nelson and the one over the Saskatchewan have been completely repainted.

Note the fly in the molasses and apply the lesson taught; he was where he had no business and for punishment was caught. Life is full of traps and pitfalls set for unsuspecting feet; but we bite and take our chances, like the fly, to gain the sweet.

Honeymooners Meet

With Auto Accident

Mr. Bert Smith and his young bride, who were married in Calgary on September 6, met with an auto accident while on their honeymoon trip. They were on their way from Davenport to Seattle, when something went wrong with the steering gear of the car and it dashed into a telephone pole throwing them both out and rendering them unconscious. They were taken to the hospital where it was found neither of them had sustained any very serious injury. Mr. and Mrs. Smith are now back in Calgary, though Mr. Smith has his arm in a sling as a result of the accident.

High School Work

In order to be successful in High School work, we must learn to study both in school and at home. Home duties should not interfere with the hours set for lessons; home duties should not be shirked but they should be definite in amount and come at a definite time.

One complete evening a week, beside Sunday, is all the student can afford from homework. The time needed for homework depends upon the concentration of mind given to the work. It should not be less than two and one half hours in addition to five good hours given in school, at work. It is better to work one hour and play for two than to sit over books for three hours with no concentration. Good habits are of inestimable value.

Horace Mann says, "There is nothing so cheap as education and nothing so costly as ignorance." But education is not cheap it requires expenditure of energy, persistence and concentration; and there the student has no help from others. No parent or teacher can supply the ambition or motive that is necessary as a driving force.

Our Alberta High School course consists of 29 units. For Grade Eleven standing 21 units are required or 23 if the student wishes to attend both Normal School and University. These 21 or 23 units may be taken in three years by a very industrious student, but 3 years is not too much to plan to spend on it. The best plan is probably to take 30 units for grade twelve standing in five years. It is best to plan this course in advance. The marks on the monthly examinations are a good indication as to whether the student is attempting too many subjects.

W. S. Korek, Principal,
Chinook Consolidated School.

ANIMALS AND MEMORY

"Nose and memory are closely associated in animal life," says a writer in *My Magazine*. "A butterfly smells out the scent of its own species; moths find their way to one another in the dark by the same organ; wolf to wolf, fox to fox, horse to horse, elephant to elephant, lion to lion—they follow their noses. They remember the characteristic scent."

"The elephant may crush a man to death and break out into the forest, but it can be reintroduced and set to work again with perfect safety. The horse would not work for us if he were able to build up into its experience all its memories of successful battle with its groom or its breaker. Cattle would defy us the camel would trample and bite us to death, conkeys would dash their way to freedom if they could understand and co-ordinate what they remember, building up experience and reasoning from it as a human does."

"Animals do not understand, though they may not forget. That is a mercy for us; but, on the other hand, if they forget, in the manner of insects and amphibians, then they would be equally useless, for they could never remember what we teach them, never realize that they are mastered. It would seem as if their type of memory were fashioned for the special advantage of the one creature capable of profiting by it—Man himself."
